Overview

The following report was prepared by Ontario Clean Water Agency on behalf of the Town of St. Marys in accordance with:

- Condition 12(4) (a) through (n) cited in Environmental Compliance Approval #6378-CB3M2T issued July 27, 2022, to The Corporation of the Separated Town of St. Marys.
- Schedule E (4) cited in Environmental Compliance Approval #056-W601 issued January 10, 2023, to The Corporation of the Separated Town of St. Marys.

System Process Description

The St. Marys WWTP is located at 309 Thomas Street, St. Marys, Ontario. The plant is an Anoxic/Oxic Biological Nutrient Removal (A/O BNR) System with Integrated Sludge Management. The facility has a rated capacity of 5,560 m³/d and is comprised of the following components:

- Wastewater collection system and pumping stations
- Preliminary treatment facility consisting of screens and grit removal
- Anoxic tanks
- Biological treatment facility including supplementary treatment system
- Secondary sedimentation consisting of two secondary clarifiers
- Disinfection system
- Biosolids Handling

Raw Wastewater Collection

Raw sewage typically flows by gravity throughout the system to the wastewater treatment plant. Where gravity flow is not possible due to elevation restrictions, raw sewage flows by gravity to each of the three pump stations that service the Town of St. Marys and from there is pumped to the wastewater treatment plant. The three pump stations are located as follows:

- Emily Street Pump Station consisting of 2, 30 HP pumps controlled by floats with high level float alarm.
- Robinson Street Pump Station consisting of 2, 7.5 HP pumps controlled by Milltronics with high level float alarm and an emergency back-up generator.
- Queen Street Pump Station consisting of 2, 10 HP pumps controlled by Milltronics with high level float alarm and an emergency back-up generator.

Inlet Works

Raw sewage flows from the collection system and the three pump stations into the wet well; raw sewage passes through automatic bar screens on route to the wet well. The raw sewage is then pumped through a grit tank and communitron. Grit is removed and conveyed into a bin that is sent to landfill for disposal. Raw sewage continues to flow by gravity to the process anoxic tanks.

Anoxic Tanks

The Raw sewage is introduced to the anoxic tanks along with recirculated material from the process aeration tanks and the clarifier's return activated sludge (RAS). Contents of each 2,359 m³ anoxic tank is

continually mixed with a mechanical mixer. The anoxic and aeration tanks contain micro-organisms that degrade, organics, nitrogen, and phosphorus in the wastewater.

Aeration Tanks

Sewage enters through the inlet chamber, where flow is split off to three distribution chambers which feed the three 859 m³ aeration basins. The parallel operating aeration basins are each equipped with fine air bubble diffusers. Air introduced here in the waste stream promotes oxidizing the carbon and ammonia from the raw sewage. In 2015 a 150 HP turbo blower was installed to provide a minimum of 2,506 m³ of air/hour replacing one of the centrifugal blowers.

One phosphorus removal system capable of processing internal recycle streams consisting of one polymerized aluminum sulphate feed system consisting of two chemical feed pumps discharging into the channel of the outlet of the aeration tanks.

Secondary Clarifiers

Sewage is split amongst four centre feed round clarifiers, two larger 802 m³ clarifiers and two smaller 268 m³ clarifiers. Return activated sludge (RAS) collected from clarifiers can be transferred to the anoxic tanks or to waste activated equalization tanks. Waste activated equalization tanks are holding tanks utilized for the sludge thickening process.

Final Effluent Disinfection

Effluent passes through two ultraviolet lamp arrays containing a total of 112 lamps. A sodium hypochlorite liquid feed system is provided for backup chlorination in the event of UV failure. Final effluent is discharged via pipe to the outfall on the bank of the Thames River.

Biosolids Handling

Waste activated sludge (WAS) is pumped from the two 230 m³ waste activated sludge equalization tanks (WASEQ), equipped with coarse air diffusion, into a flocculation tank for polymer addition and then into a rotary drum thickener for dewatering. The thickened waste activated sludge (TWAS) is pumped into one of the two sludge storage tanks that were previously used as digesters. Supernatant is taken off the top of the storage tanks to thicken the sludge. Sludge from these storage tanks is then dosed with polymer and processed through a dewatering centrifuge. The dewatered sludge produced by the centrifuge is pumped to the Lystek reactor to compete the Lystek process. Biosolids are mixed with potassium hydroxide in the heated mixing tank and processed.

Product from the mixing tank is pumped to a mixed storage tank equipped with an activated carbon odour control system. Biosolids are loaded from an overhead loading dock into a tanker for approved disposal. The loading area is equipped with curbing and is graded to catch basins tied into the process.

Standby Power

The wastewater treatment plant has an automatic standby generator, which will operate the plants essential components when a utility power failure occurs.

System Facts:

Environmental Compliance Approval	#6378-CB3M2T (issued July 27, 2022)
CLI Environmental Compliance Approval	#056-W601 (issued January 10, 2023)
Rated Capacity	5,560m ³ /d
Receiving Water	Thames River – North Branch

For 2023, the St. Marys WWTP and WWC system was operated in accordance with the provincial regulations as required in ECA #6378-CB3M2T and CLI-ECA #056-W601. The following report is presented such that it corresponds with ECA Condition 12(4) (a) through (n) and CLI-ECA Schedule E Condition 4.6.

Collection System Monitoring

Industrial Contributors

The St. Marys wastewater collection system industrial contributors are monitored for BOD5, total suspended solids, total phosphorous and oil & grease on a weekly basis by means of composite sample. This monitoring provides information on potential adverse impacts on the WWTP as well as for the Town to enforce their Sewer Use Bylaw. Refer to Figures 1 through 4 and ***Operating Problems & Corrective Actions*** section for more details on the results from the industrial contributors.

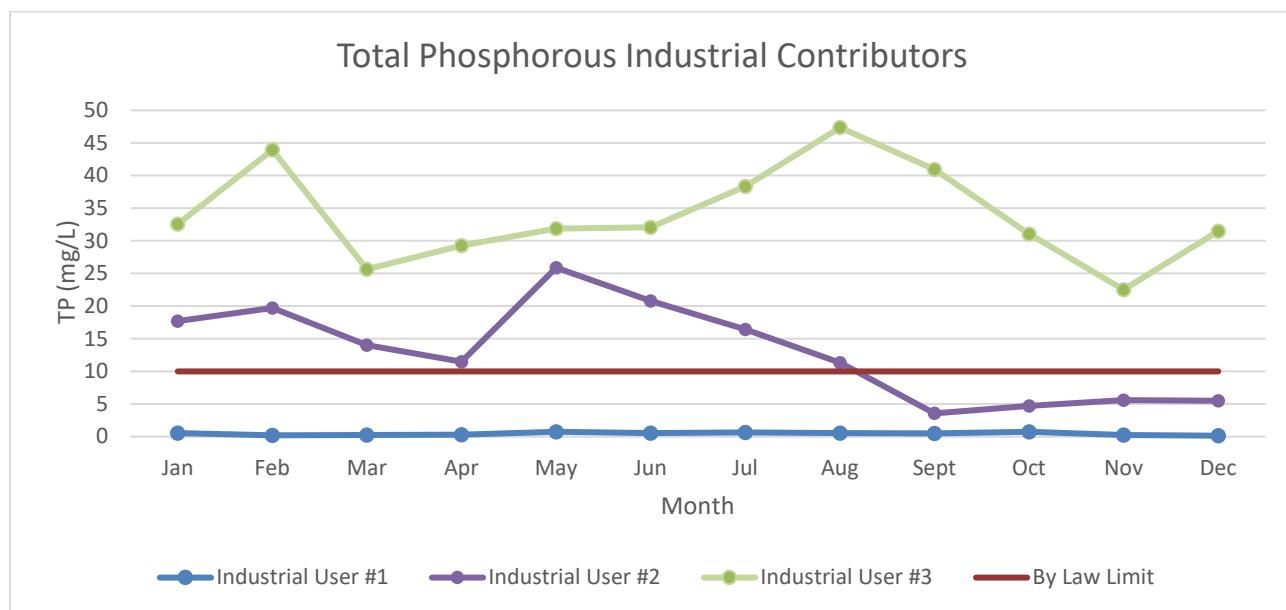

Figure 1. Monthly Average TP results from Industrial Contributors

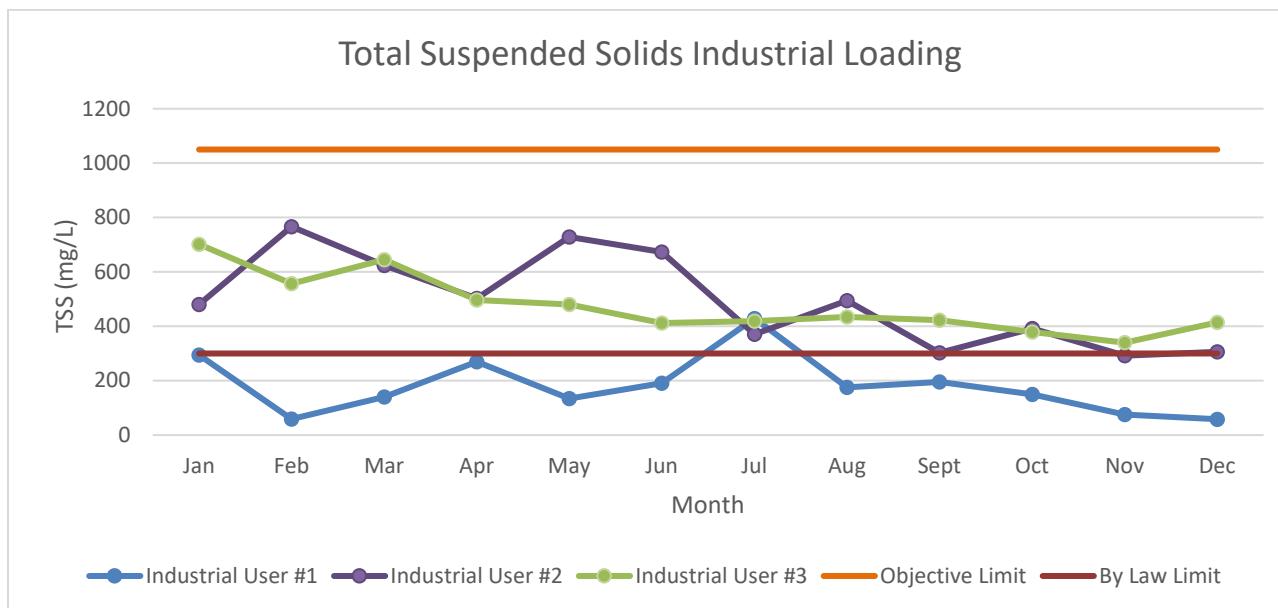

Figure 2. Monthly Average TSS from Industrial Contributors

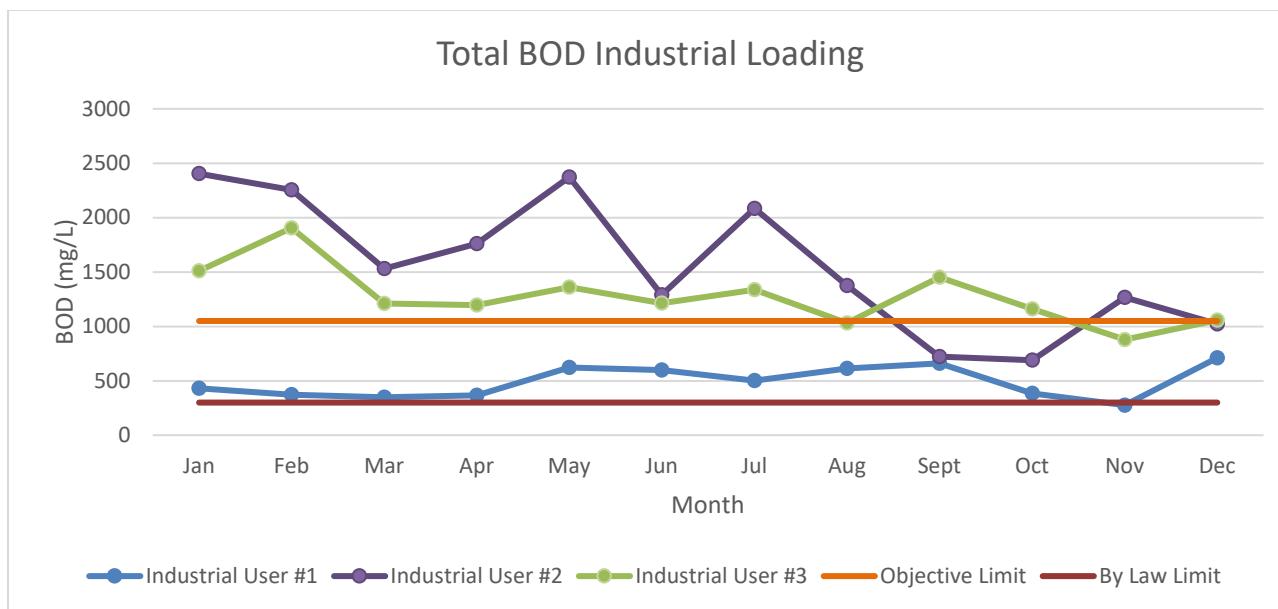

Figure 3. Monthly Average BOD from Industrial Contributors

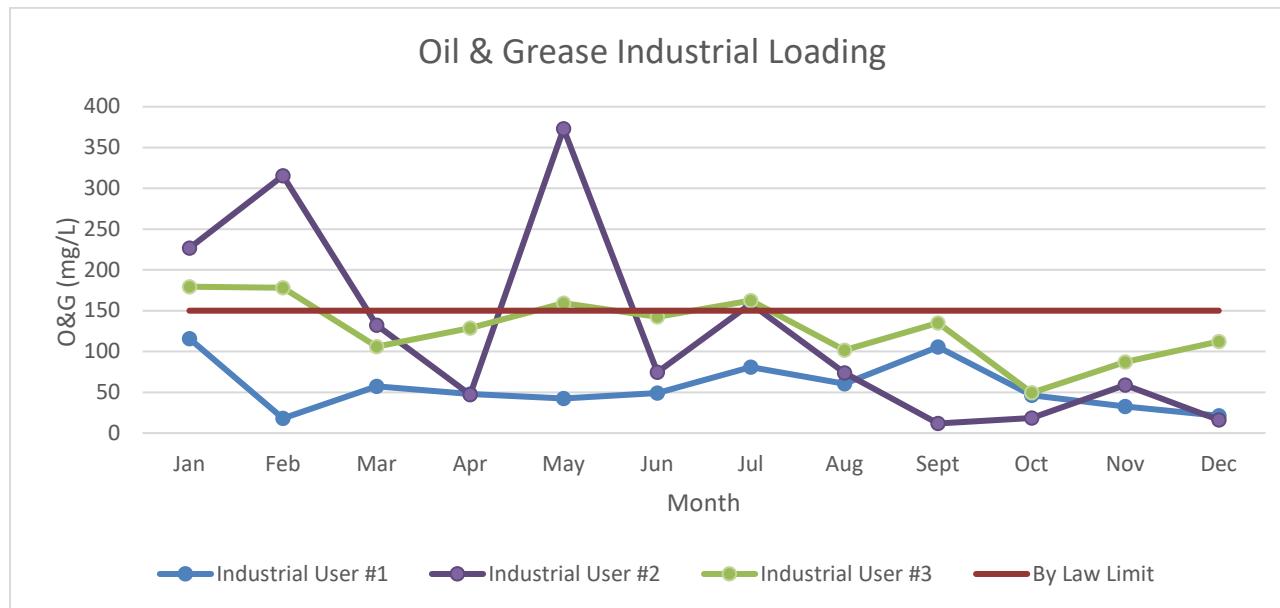

Figure 4. Monthly Average Oil & Grease from Industrial Contributors

Imported Sewage

The St. Marys WWTP is approved to accept imported sewage by licensed waste management system operators as identified within R.R.O Reg. 347: General Waste Management, as amended. In 2023, the WWTP has accepted 16.3 m³ of imported sewage as shown in Table 1.

Date	Volume (m ³)
April 4 th , 2023	10.6
April 17 th , 2023	5.7
Total	16.3

Table 1. Total Imported Sewage

A grab sample is required to be collected monthly when receiving imported sewage, refer to Table 2 for a summary of imported sewage monitoring data.

Date	BOD ₅ (mg/L)	TSS (mg/L)	TP (mg/L)	TKN (mg/L)
April 4 th , 2023	456	311	20	210
April 17 th , 2023	2,560	65,6000	713	1,570
Average	1,512.5	32,955.5	366.5	890

Table 2. Imported Sewage Grab Results

Influent Flow Monitoring

The St. Marys WWTP is rated to treat an average daily flow of 5,560 m³. Refer to Figure 5 for a comparison of the average daily flow for the last six years against the rated capacity of the plant. The WWTP is at 82 % of the rated capacity of 5,560 m³/d.

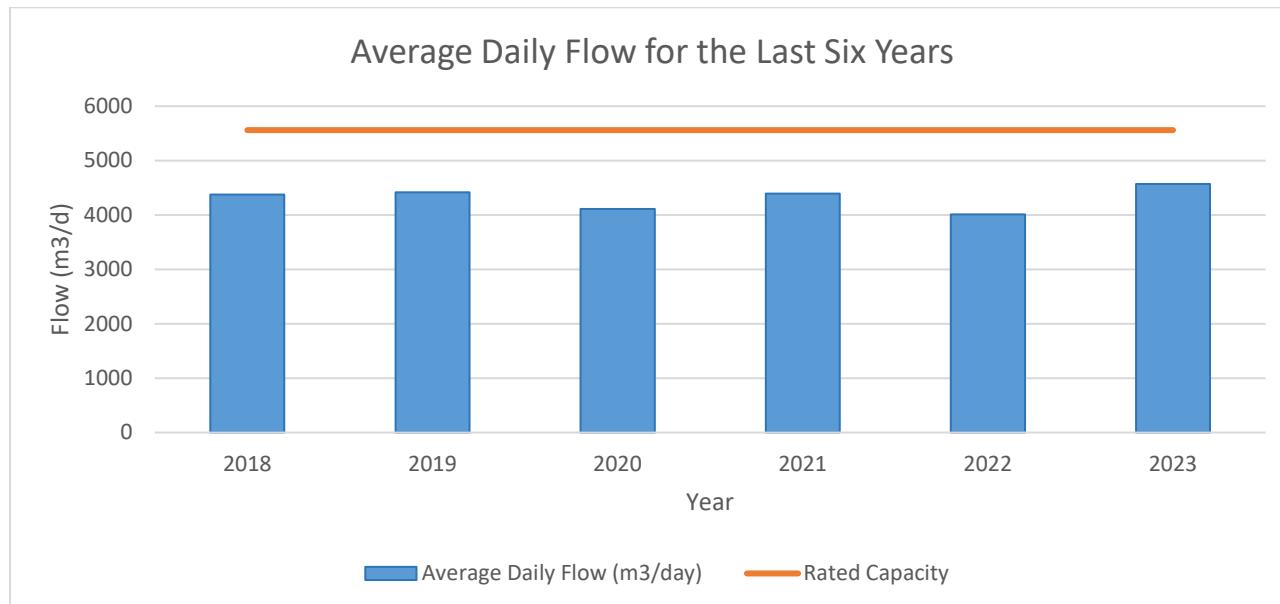

Figure 5. Average Daily Flow or the Last Six Years

The raw sewage average daily flow in 2023 was 4,571 m³/d, the average daily flow in 2022 was 4,013 m³/d. This is a 13.9% increase from the 2022 average daily flows. Refer to Figure 6 for average daily flow each month and the overall annual average daily flow.

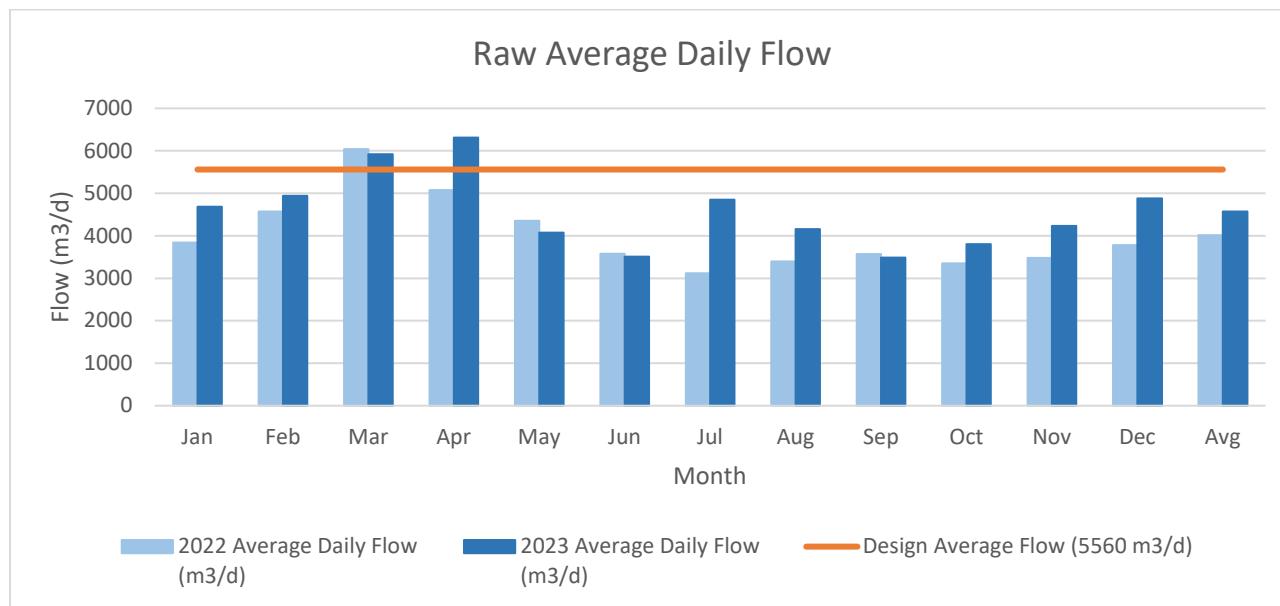

Figure 6. Average Daily Flow each Month

Influent Data

The influent is monitored for BOD5, total suspended solids, total phosphorous, alkalinity, total ammonia nitrogen and total kjeldahl nitrogen on a weekly basis by means of composite sample. Refer to Appendix A for more detail on monthly results.

Biochemical Oxygen Demand

In 2023, the average raw Biochemical Oxygen Demand (BOD5) concentration was 361mg/L, this is a 3.7% decrease from 2022. Refer to Figure 7 for a comparison of 2023 monthly raw BOD5 concentrations to 2022 concentrations.

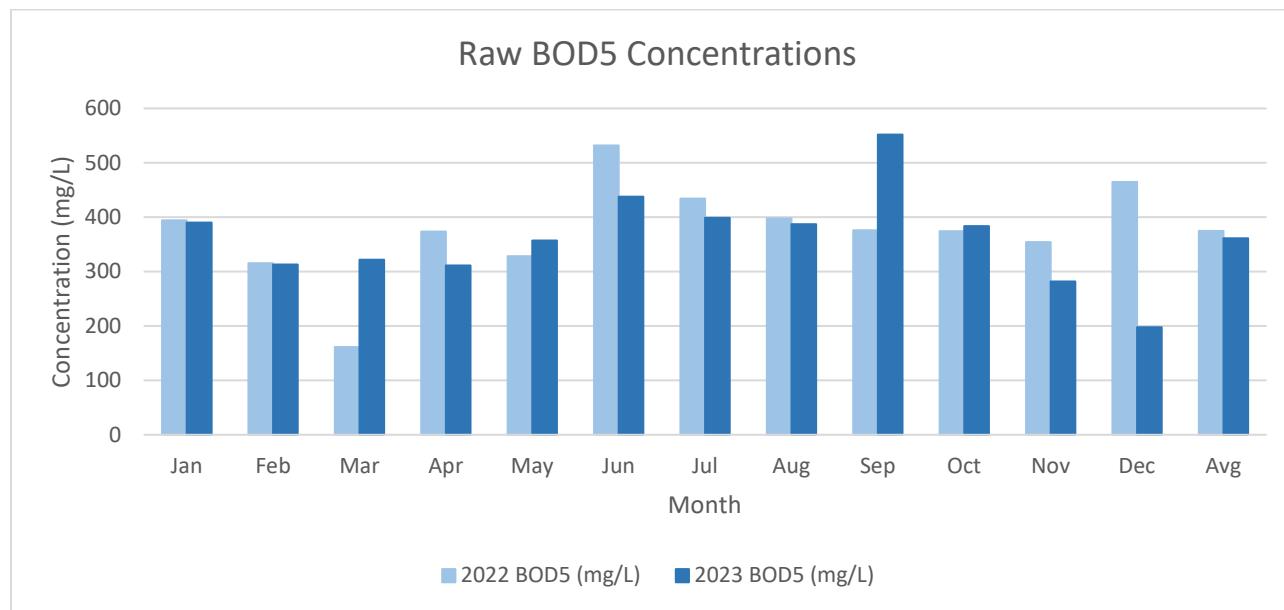

Figure 7. Raw BOD Concentrations

Total Suspended Solids

In 2023, the average raw Total Suspended Solids (TSS) concentration is 348 mg/L, this is a 12.4% increase from 2022. Refer to Figure 8 for a comparison of 2023 monthly raw TSS concentrations to 2022 concentrations.

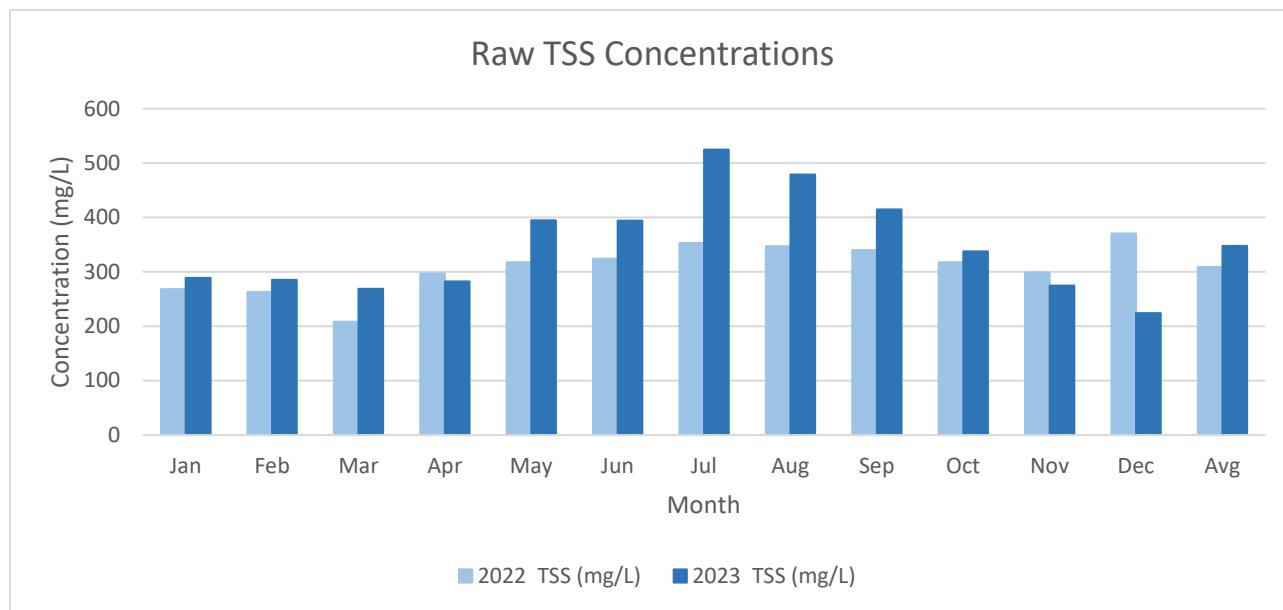

Figure 8. Raw TSS Concentrations

Total Phosphorus

In 2023, the average raw Total Phosphorus (TP) concentration is 7.0 mg/L, this is a 32.2% increase from 2022. Refer to Figure 9 for a comparison of 2023 monthly raw TP concentrations to 2022 concentrations.

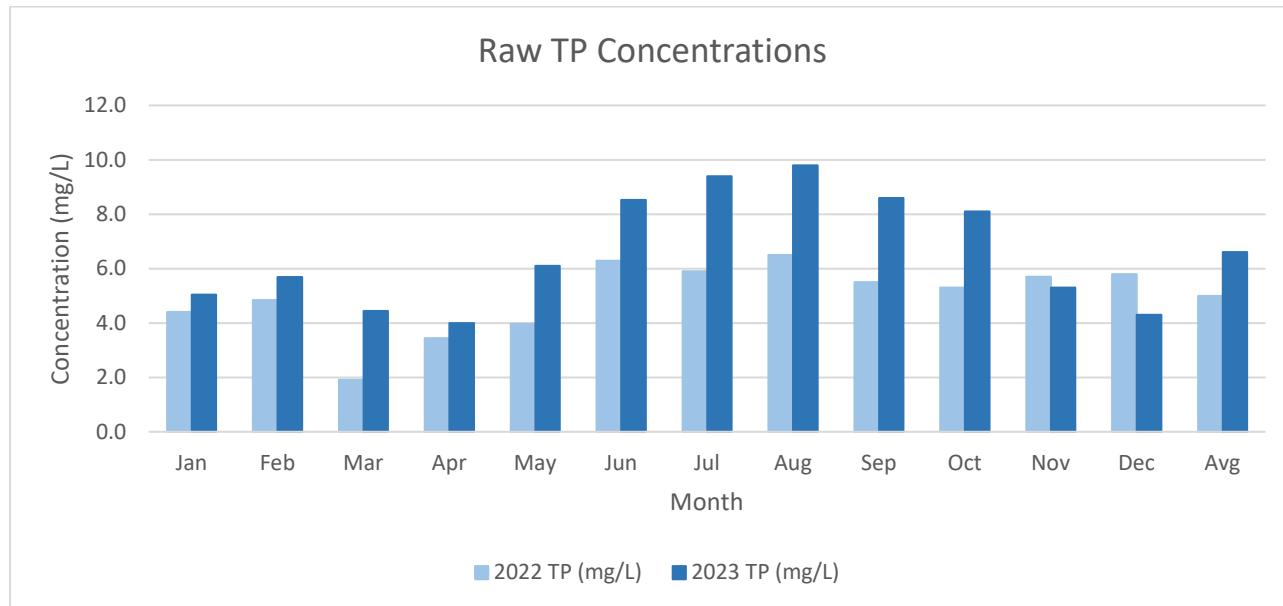

Figure 9. Raw TP Concentrations

Total Kjeldahl Nitrogen

In 2023, the average raw Total Kjeldahl Nitrogen (TKN) concentration is 37.7 mg/L, this is a 17.1% increase from 2022. Refer to Figure 10 for a comparison of 2023 monthly raw TKN concentrations to 2022 concentrations.

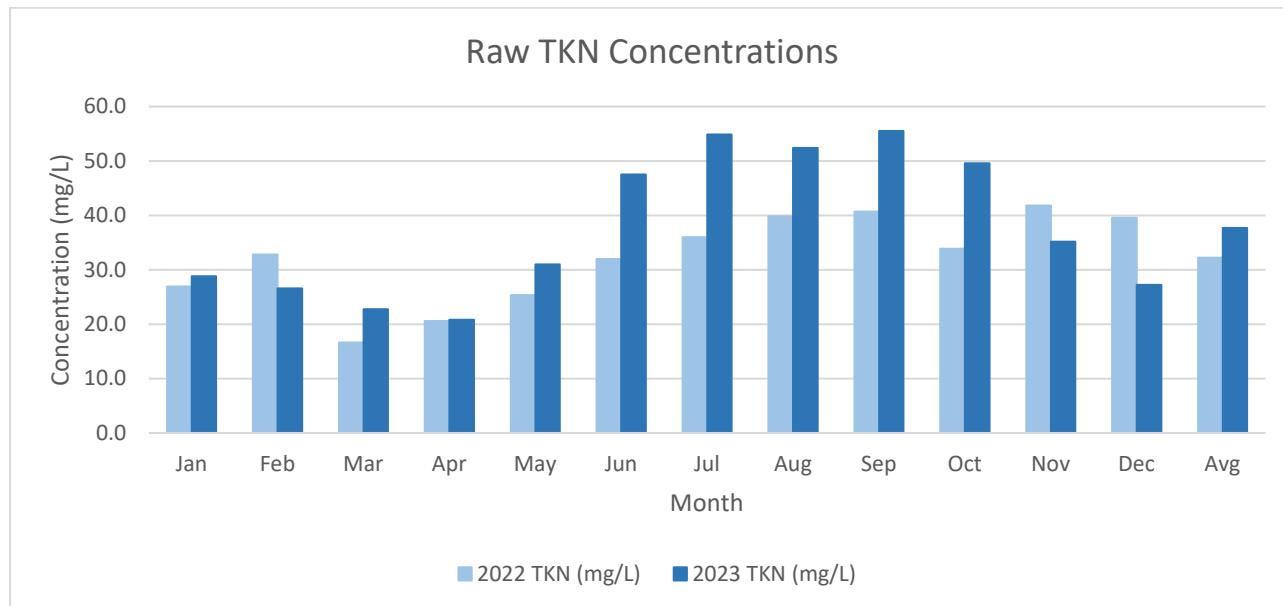

Figure 10. Raw TKN Concentrations

Total Ammonia Nitrogen

In 2023, the average raw Total Ammonia Nitrogen (TAN) concentration is 19.4 mg/L, this is a 2.3% decrease from 2022. Refer to Figure 11 for comparison of 2023 monthly raw TAN concentrations to 2022 concentrations.

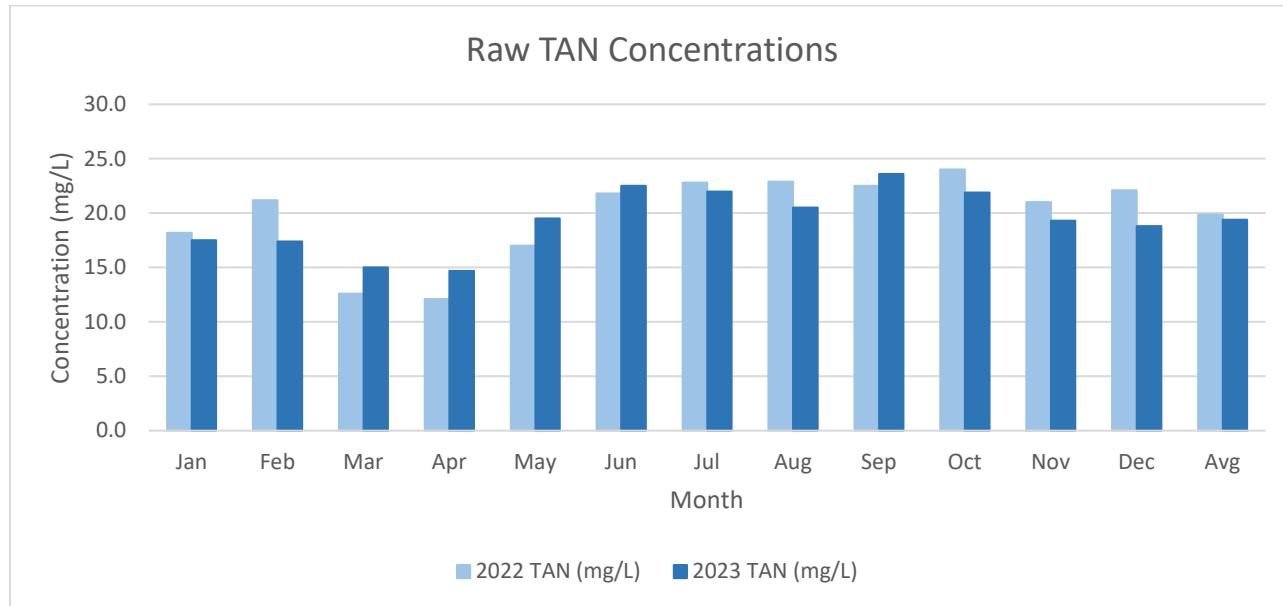

Figure 11. Raw TAN Concentrations

Comparison to Compliance Limits and Objectives

Effluent from the St. Marys WWTP is sampled for on a weekly basis and analyzed for: CBOD₅, Total Suspended Solids, Total Phosphorous and Total Ammonia Nitrogen by a composite sample. Grab samples are collected weekly and tested for E.coli, pH and dissolved oxygen. Detailed results are found in Appendix A. For details on objective and limit exceedances refer to ***Summary of Efforts Made to Achieve Design Objectives.***

CBOD5

St. Marys WWTP average monthly effluent Carbonaceous Biochemical Oxygen Demand (CBOD₅) concentration in 2023 was 4.3 mg/L, which is an 18.3% increase from the annual average in 2022. The effluent monthly average limits have been met for CBOD₅ in 2023. Refer to Figure 12 for a comparison of 2023 monthly effluent CBOD₅ concentrations to 2022 concentrations. There was one single sample limit exceedance in July 2023. Refer to Figure 13 for the single sample concentrations compared to the exceedance limit. For details on the objective and limit exceedances refer to ***Summary of Efforts Made to Achieve Design Objectives.***

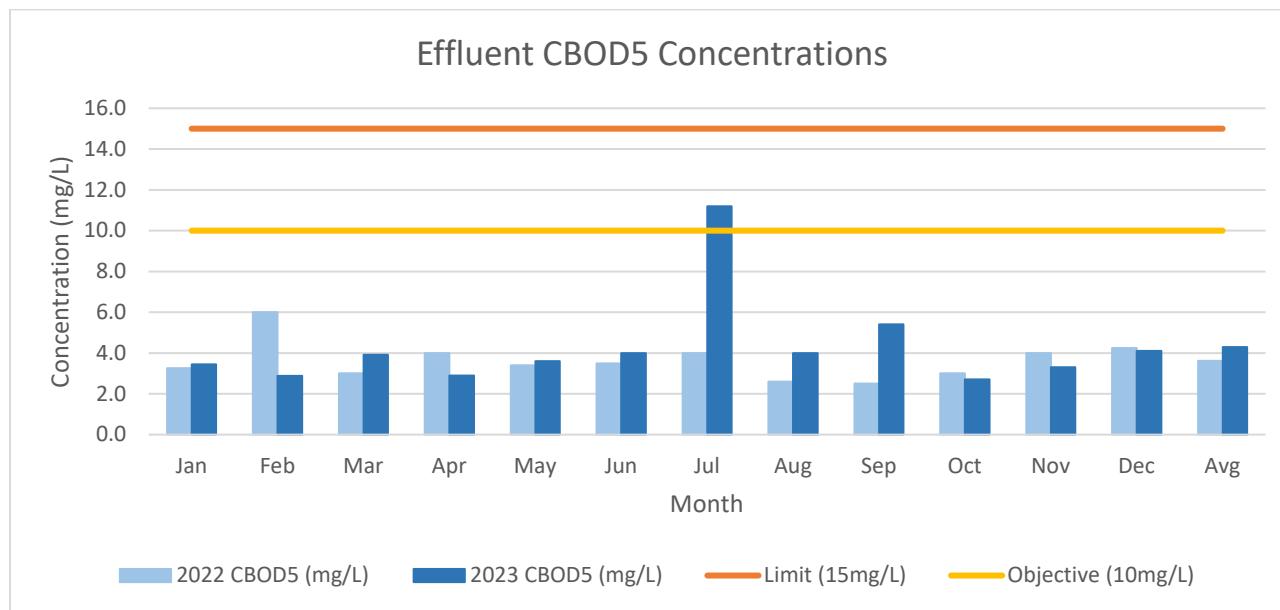

Figure 12. Effluent CBOD Concentrations

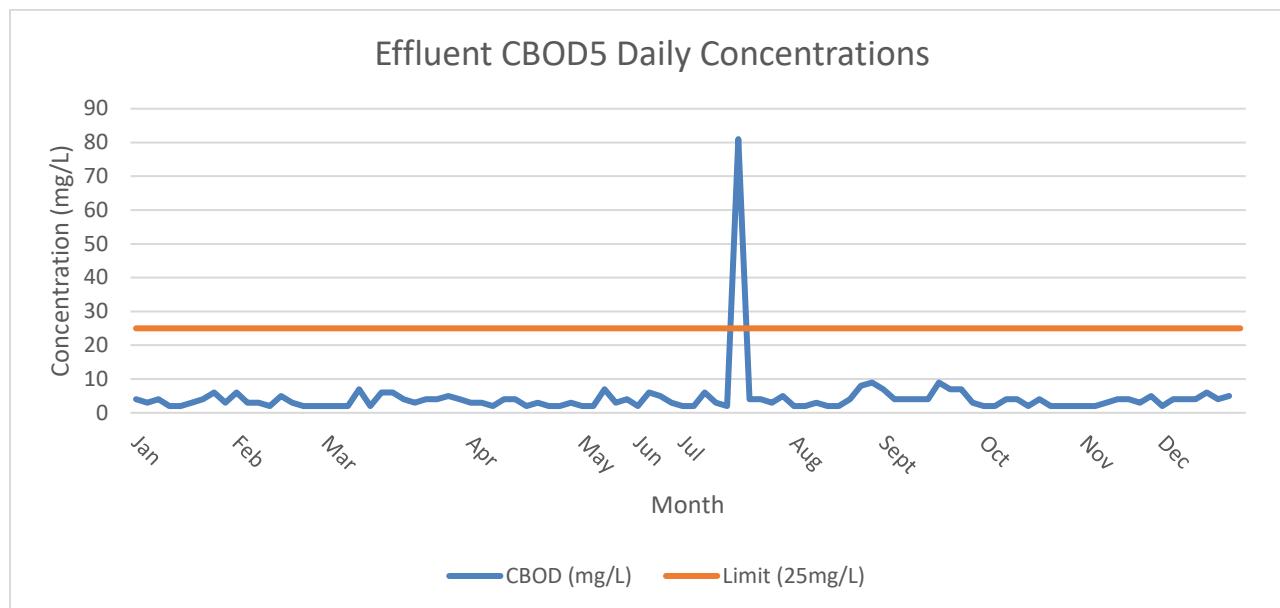

Figure 13. Effluent Single Sample CBOD Concentrations

Total Suspended Solids

The average monthly effluent Total Suspended Solids (TSS) concentration in 2023 was 8.4 mg/L, which is a 0.7% increase from the annual average in 2022. All monthly average and single sample limits were met for 2023. For details on the objective exceedances refer to **Summary of Efforts Made to Achieve Design Objectives**. Refer to Figure 14 for a comparison of 2023 monthly effluent TSS concentrations to 2022 concentrations. Refer to Figure 15 for the single sample concentrations compared to the exceedance limit.

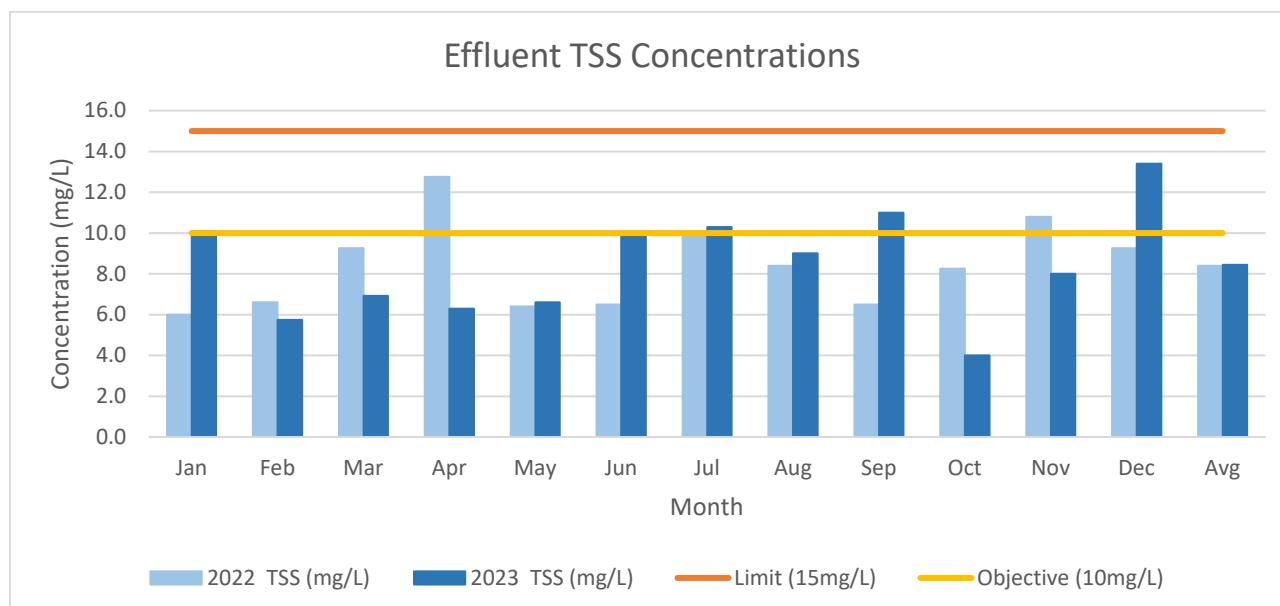

Figure 14 Effluent TSS Concentrations.

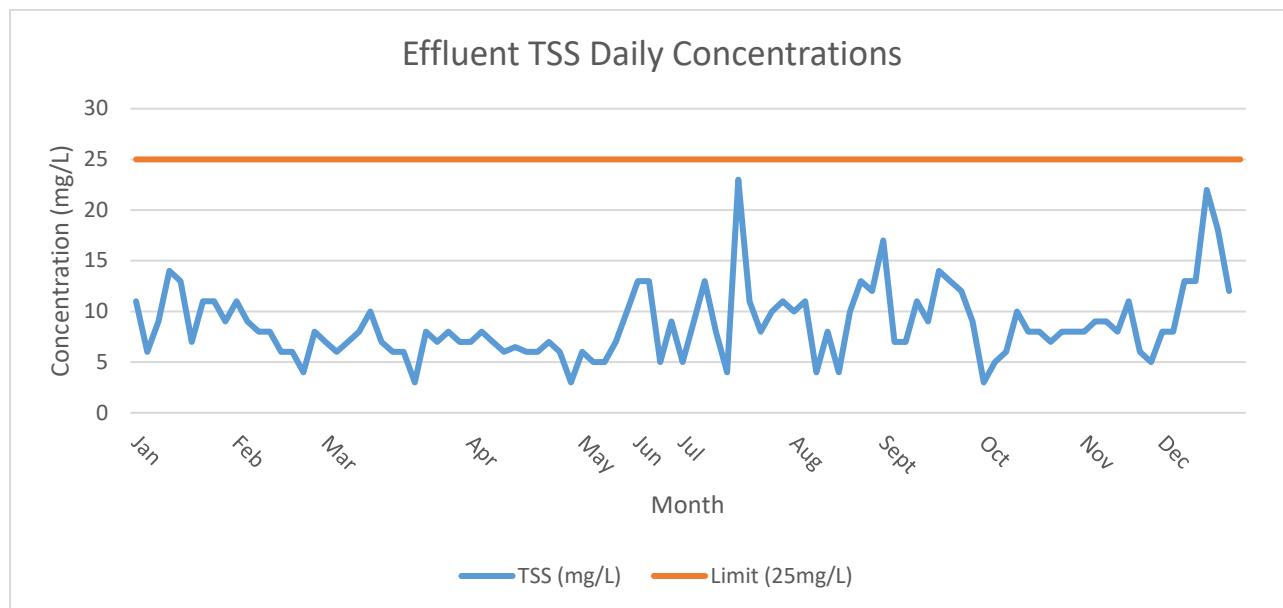

Figure 15. Effluent Single Sample TSS Concentrations

Total Phosphorus

The average monthly effluent Total Phosphorus (TP) concentration in 2023 was 0.45 mg/L, which is an 86.8% increase from the annual average in 2022. There was one monthly average limit exceedance and five single sample limit exceedances in 2023. This was due to upgrades to the Aeration Tanks in 2023. For details on the objective and limit exceedances refer to **Summary of Efforts Made to Achieve Design Objectives**. Refer to Figure 16 for a comparison of 2023 monthly effluent TP concentrations to 2022 concentrations. Refer to Figure 17 for the single sample concentrations compared to the exceedance limit.

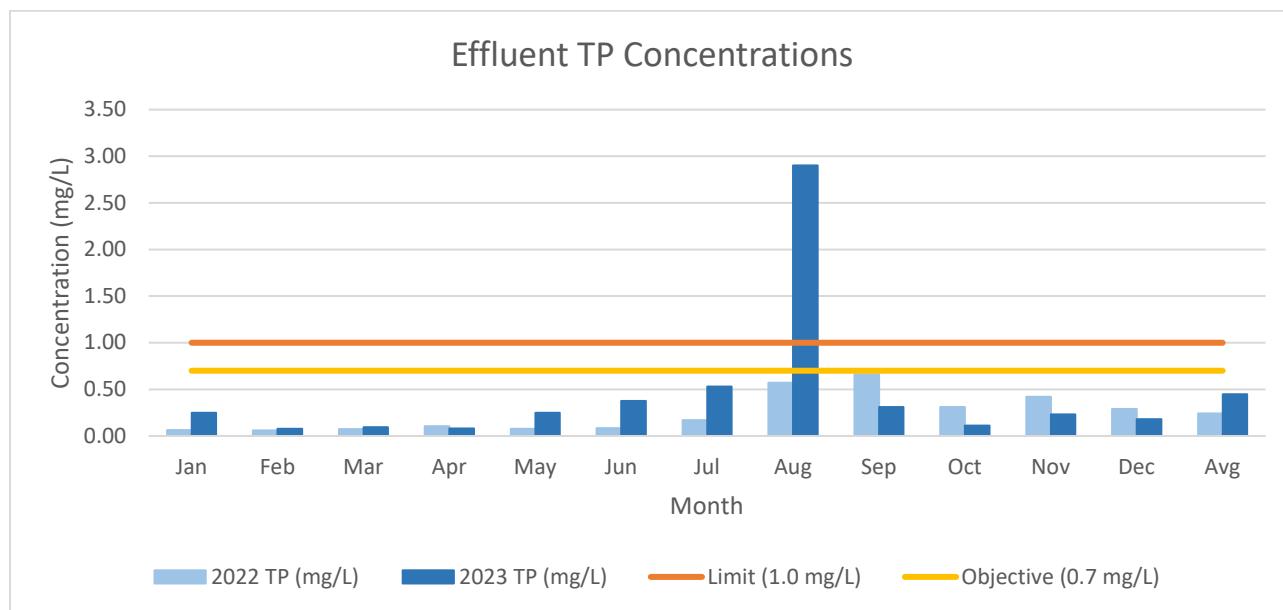

Figure 16 Effluent TP Concentrations

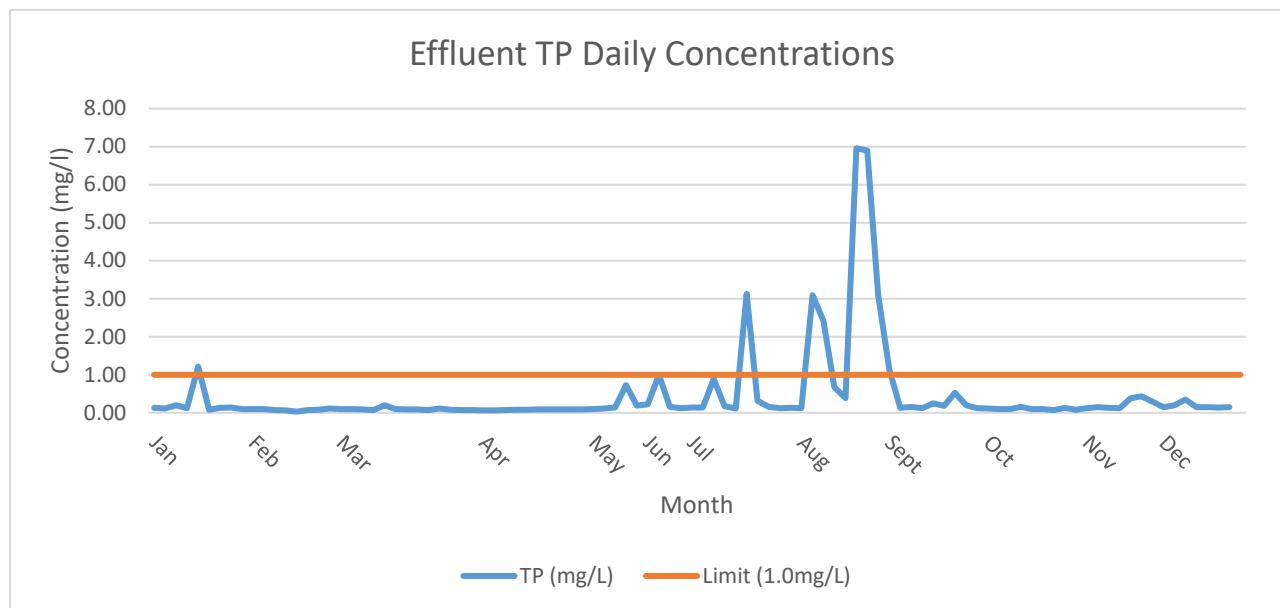

Figure 17 Effluent Single Sample TP Concentrations

Total Ammonia Nitrogen

The average monthly effluent Total Ammonia Nitrogen (TAN) in 2023 was 2.4 mg/L, which is a 110% increase from the annual average in 2022. There was one monthly average limit exceedance and 11 single sample limit exceedances in 2023. This was due to upgrades to the aeration tanks in 2023. For details on the objective exceedances refer to **Summary of Efforts Made to Achieve Design Objectives**.

Objectives. Refer to Figure 18 for a comparison of 2023 monthly effluent TAN concentrations to 2022 concentrations. Refer to Figure 19 for the single sample concentrations compared to the exceedance limit.

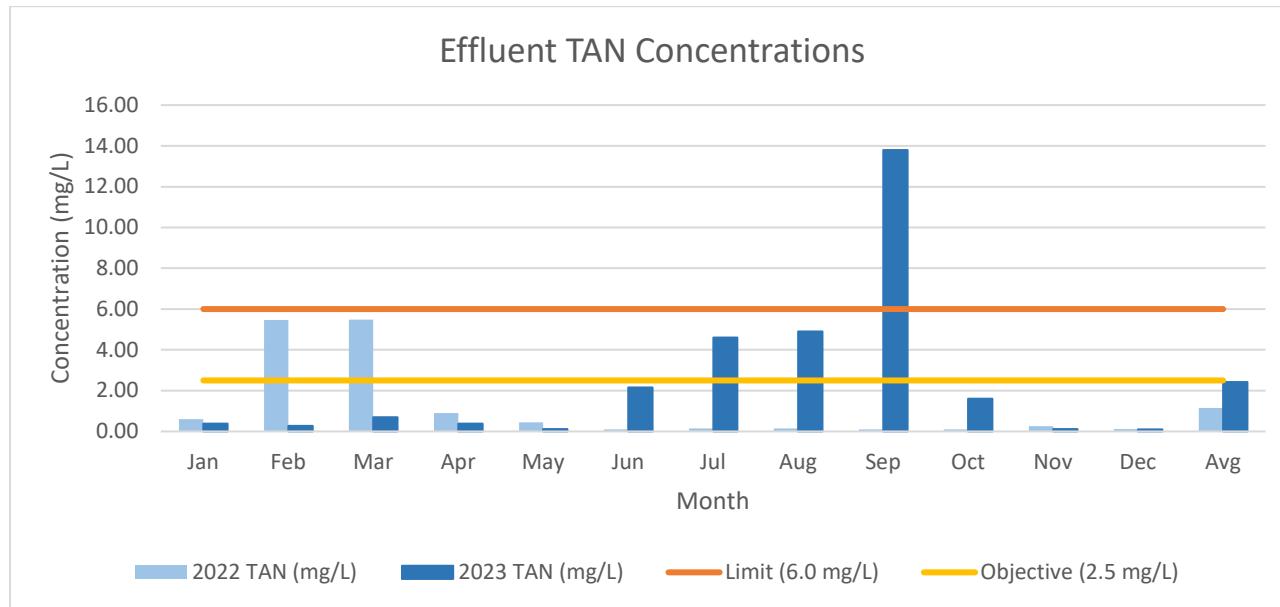

Figure 18 Effluent TAN Concentrations

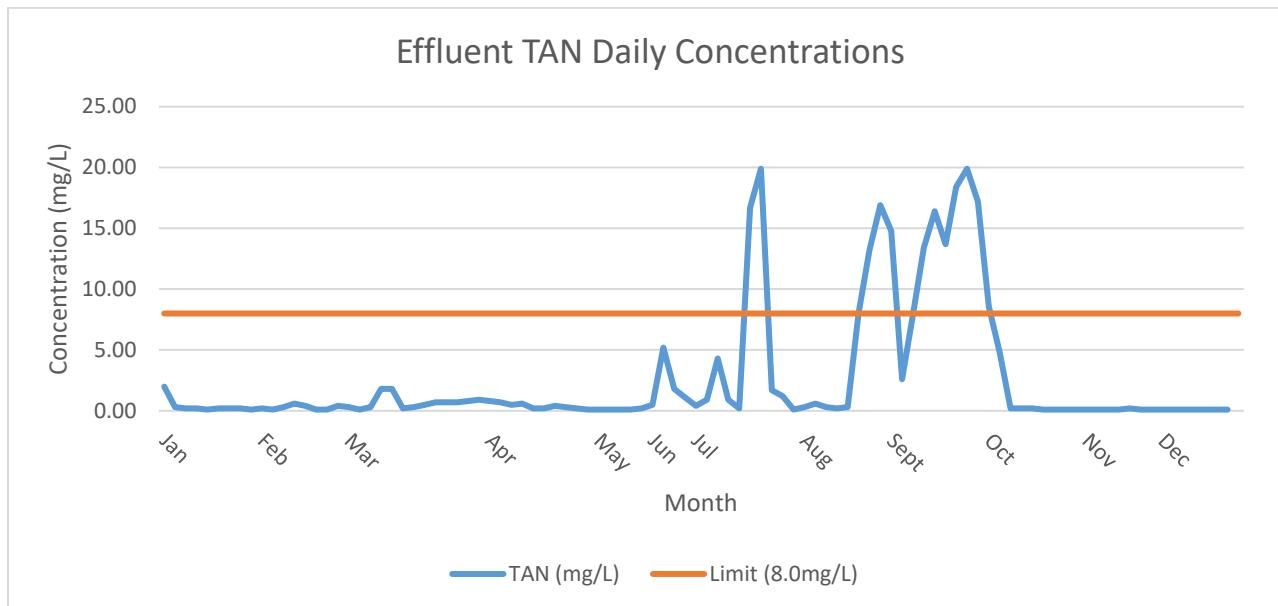

Figure 19 Effluent Single Sample TAN Concentrations

E-Coli

The monthly geometric mean effluent E. coli concentration in 2023 was 13.5 cfu/100mL, which is a 41% decrease from the annual average in 2022. There were no objective or limit exceedances in 2023. Refer to Figure 20 for a comparison of 2023 monthly effluent E. coli concentrations to 2022 concentrations.

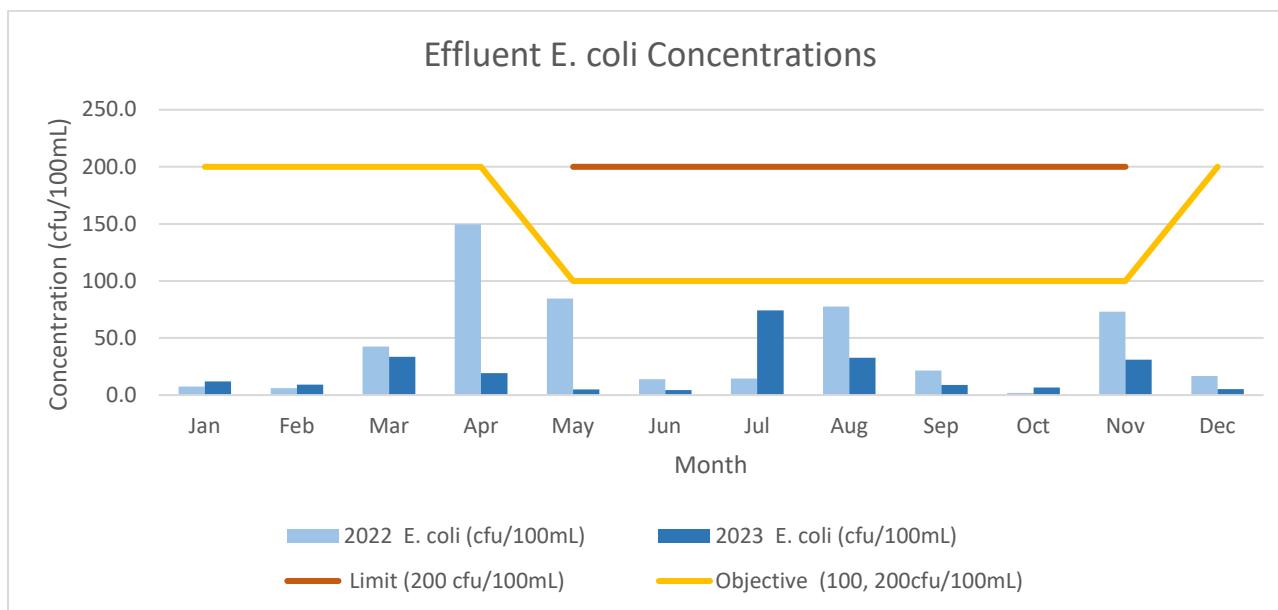

Figure 20 Effluent E. coli Concentrations

pH

The annual monthly average for pH concentration in 2023 was 7.4. There was one objective exceedance, which did not result in a limit exceedance. For details on the objective exceedance refer to **Summary of Efforts Made to Achieve Design Objectives**. Refer to Figure 21 for a comparison of 2023 daily effluent pH values to the objectives and limits.

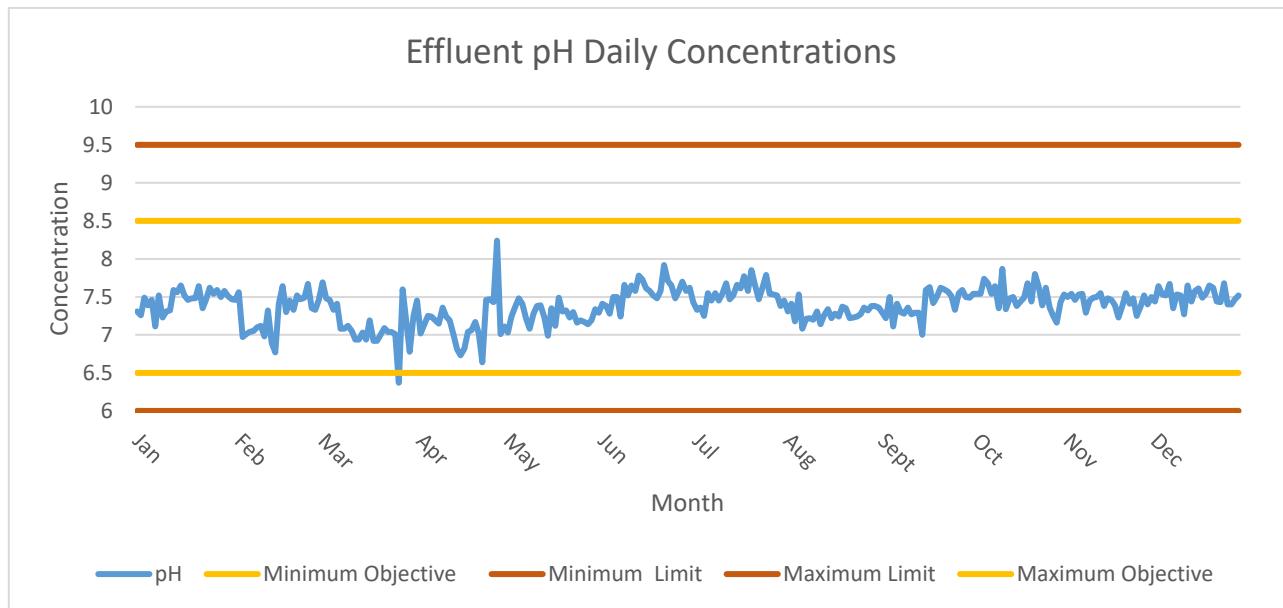

Figure 21 Effluent pH Values

Dissolved Oxygen

The annual monthly average for Dissolved Oxygen (DO) concentration in 2023 was 7.5 mg/L. There were no objective exceedances in 2023. Refer to Figure 22 for a comparison of 2023 daily effluent DO concentrations to the objective.

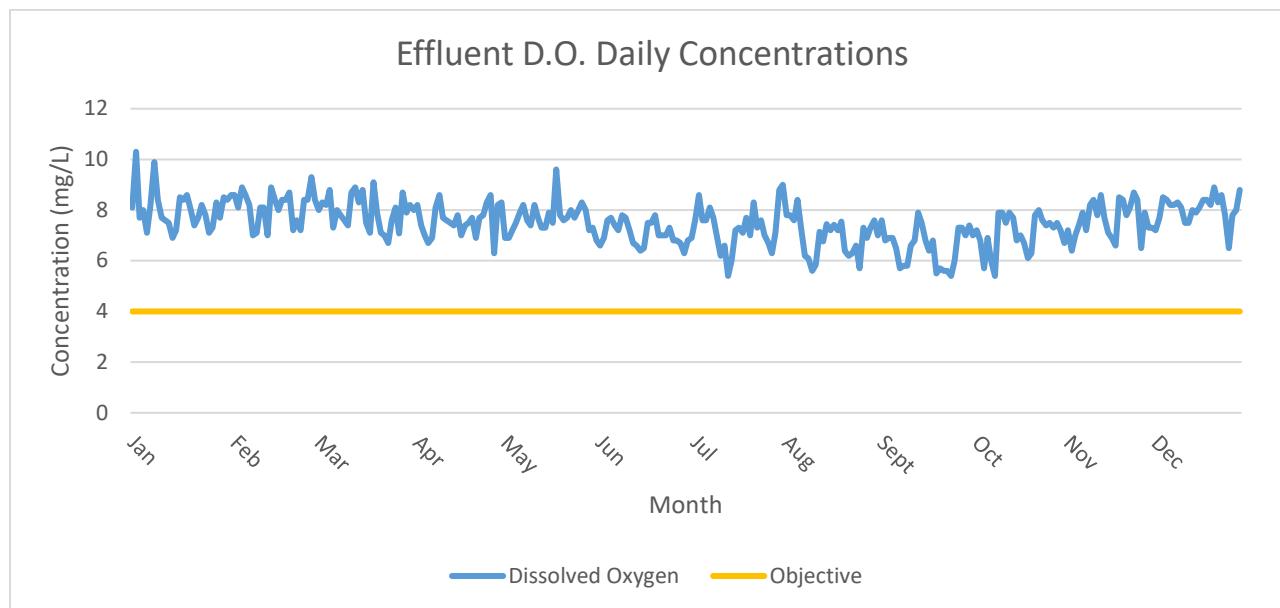

Figure 22 Effluent DO Concentrations

Deviations from Monitoring Schedule

Deviations from the 2023 sample calendar are outlined in Table 5. Refer to Appendix C for the 2024 sampling schedule.

Scheduled Date	Collected Date	Reason for Deviation
January 3, 2023	January 4, 2023	Acute Lethality moved due to scheduling issue
April 12, 2023	April 24, 2023	Quarterly samples moved due facility issue/scheduling conflict
June 7, 2023	June 8, 2023	Final Effluent sampled due to facility issue/schedule conflict
November 14, 20 & 27, 2023	N/A	Samples not required to be collected due to aeration project being completely early

Table 1. Summary of Deviations from Monitoring Schedule

Operating Problems and Corrective Actions

In 2023, there were challenges in meeting Total Phosphorous and Total Ammonia Nitrogen daily and monthly average limits. Operational staff made process adjustments and carefully monitored the treatment process to help alleviate the effects of the increased loading.

These exceedances were a direct result of upgrades made to the aeration system between July and November compounded by industrial loadings. Operational staff were in frequent communication with the OCWA's Innovations, Process Optimization and Technical Services Team to troubleshoot solutions for optimal plant performance. Following the upgrades, effluent quality has since improved contributing to better wastewater treatment outcomes. These adjustments were part of ongoing efforts to improve system efficiency and environmental performance.

Refer to **Bypass, Overflows, Spills & Abnormal Discharge Events & Summary of Efforts Made to Achieve Design Objectives** for event details.

The collection system is routinely monitored to enforce the municipal bylaw for sewage discharges. The results have identified some areas of concern in which the Town of St. Marys is addressing through bylaw enforcement. Through these efforts, it was identified that an industrial contributor had changed the cleaning product being used, which contained high levels of phosphorous. Communication between the Town of St. Marys and the industrial contributor initiated a review of practices, where they converted to an alternative cleaning agent. Another industrial contributor, which has caused plant upsets in the past had installed pre-treatment.

Furthermore, the completion of the Aeration Tank Project upgrades, has proven to provide better oxygen transfer and effective TAN removal. Improvements can be viewed in **Comparison to Compliance Limits & Objectives**.

Capital and major maintenance recommendations have been submitted by OCWA to the Town of St. Marys to address aging infrastructure and ongoing maintenance requirements for the collection system and WWTP to continue to produce high quality effluent. Items included on the list for 2024 are:

- General repairs
- UV system repairs
- Clarifier chamber clean out
- Turbo blower annual maintenance
- SCADA upgrades
- Clarifier #3 and #4 weir replacements - engineering
- Centrifuge bowl and bearing replacements
- Muffin Monster Grinder Pump rebuild for Lystek centrifuge
- RAS pump #5 replacement
- Gas boiler removal, heater additions and annual maintenance
- Dewatered sludge pump rebuild P 252
- Internal recirculation pump rebuild P 321
- Installation of VFD's for: centrifuge feed, Lystek mixer, flocculator, and RDT
- Cured in place pipe lining of wastewater collection system
- Emily St SPS Milltronic's controls replacement
- Emily St SPS pump #1 rebuild

Maintenance Activities

Preventative and corrective maintenance is assigned and monitored within the Workplace Management System (WMS) program. Refer to Appendix B for the maintenance summary for 2023. Refer to Table 6 for a list of repairs and replacements that took place in 2023.

Major Maintenance-WWTP
New steam boiler for Lystek process
Gas boiler repairs
Replaced dissolved oxygen sensor
Repairs on final effluent disinfection system (UV)
Replacement of the water line for the headworks equipment
Muffin Monster new grinder equipment on bar screen

Major Maintenance-WWTP
Replaced three raw sewage pumps
Replaced RAS pump #4
Rebuild of anoxic tank mixer
Replaced Hot water tank for Lystek building
Replaced HMI screen for centrifuge PLC for Lystek process
Replaced aeration piping and diffusers
Replaced space heater in bar screen room
Major Maintenance-WWC
Investigate sanitary system for blockage on Elizabeth Street
Repair sanitary clean-out on Brock Street
Emily St. SPS pump #2 rebuild
Replaced Industrial autosampler
1,100 linear metres of Cured In Place Pipe (CIPP) sewer rehabilitation

Table 2. Major Maintenance

Effluent Quality Assurance

Effluent quality assurance is evaluated by monitoring parameters and changes throughout the facilities processes. Operational staff monitor plant performance by performing weekly in-house laboratory analysis on; raw sewage, raw sludge, primary sludge, mixed liquor and effluent. These tests include dissolved oxygen, pH, temperature, settling tests and Mixed Liquor Suspended Solids (MLSS). chemical dosages and wasting volumes are also monitored and recorded. Data collected from these tests provide valuable information to the operators to make the appropriate adjustments in the treatment process and take corrective actions before the plant reaches its effluent limits.

Calibration Records

Influent and effluent flow meters were calibrated by Pierce Services & Solutions Inc. on June 7th and 8th, 2023. The flow meters met the accuracy tolerance of within 15% of the actual flow rate. Imported sewage volumes are calculated utilizing the haul truck manifests. All in-house meters were also calibrated by Pierce Services & Solutions Inc. in accordance with manufactures instructions. Operational staff complete routine pH meter calibrations and verifications.

All pump station level transmitters were also calibrated by Pierce Services & Solutions Inc. in accordance with manufactures instructions.

Refer to Appendix E for the third party calibration records.

Summary of Efforts Made to Achieve Design Objectives

The St. Marys WWTP experienced several objective exceedance in 2023. There were nine monthly average objective exceedances and 22 single sample objective exceedances. Refer to Table 7 for a summary of the monthly objective exceedances and Table 8 for the single sample objective exceedances.

When the plant experiences higher flows due to snow melt and/or precipitation it can lead to objective exceedances for TSS. There were three monthly average objective exceedances in 2023. Operational

staff monitored plant performance closely when this occurs and make adjustments accordingly to ensure sufficient treatment is met.

The combination of higher flows and industrial loading led to single sample objective exceedances to TP and pH. There was one single sample exceedance for TP and one single sample exceedance for pH in 2023. Operational staff monitored plant performance closely when this occurs and make adjustments accordingly to ensure sufficient treatment is met.

Excessive foam was identified in the effluent in July due to an industrial user experiencing a process failure. This resulted in one TAN and one CBOD monthly average objective exceedance. There were also two TAN, one TP and one CBOD single sample exceedances for this event. OCWA operational staff monitored system performance, increased coagulant dosing, increased wasting and performed in-house analysis for the duration of the event. This exceedance was a direct result of the identified collection system industrial loading. The collection system is routinely monitored to enforce the municipal bylaw for sewage discharges. Refer to **Bypass, Overflows, Spills & Abnormal Discharge Events** for more event details.

The WWTP experienced an increase in raw wastewater TP concentration in August, which resulted in objective and limit exceedances. There was one monthly average TP exceedance and four single sample limit exceedances. It was identified that an industrial contributor had changed the cleaning product being used, which contained high levels of phosphorous. An alternate cleaning agent was implemented. The collection system is routinely monitored to enforce the municipal bylaw for sewage discharges. Operational staff made process changes and carefully monitor the treatment process to help alleviate the effects of the increased loading.

The Aeration Tank Project began on August 28th, which removed one aeration tank from service at a time for diffuser and piping replacement. The strain of reduced treatment capacity and industrial loading resulted in several objective exceedance during the early stages of the project. There were two total ammonia nitrogen and one TSS monthly average objective exceedances. There were 10 TAN and two TP single sample objective exceedances. Troubleshooting of the blower system was completed to ensure adequate air was provided to the remaining tanks in service. Increased sampling and in house analysis was conducted for the duration of the project. Operational staff managed the plant by optimizing the mixed liquor suspended solids, increasing sludge blanket in final clarifiers, valve adjustments and pumping from the WAS tank which is high in DO. and increasing the internal recirculation pumping to achieve denitrification as a means to bring up the DO. The project completed on November 2nd, 2023 and improved effluent quality has been experienced since.

Despite there being design objectives exceedances there were no parameters that exceeded more than 50% of the time in 2023 and there are no trends in deterioration of final effluent quality. The average influent flow has exceeded 80% of the rated capacity with it being 82% in 2023. However, the objective exceedances were not a result of hydraulic loading. The objective exceedances as described were due to precipitation, industrial loading and planned maintenance.

Date	Parameter	Concentration (mg/L)	Objective (mg/L)	Issue
01/2023	TSS	10.1	10.0	High Flows
07/2023	TSS	10.3	10.0	High Flows
07/2023	CBOD	11.2	10.0	Foam/Spill event
07/2023	TAN	4.6	2.5	Foam/Spill event
08/2023	TP	2.9	0.7	Aeration Project/Industrial Loading
08/2023	TAN	4.9	2.5	Aeration Project/Industrial Loading
09/2023	TSS	11.0	10.0	Aeration Project
09/2023	TAN	13.8	2.5	Aeration Project/Industrial Loading
12/2023	TSS	13.4	10.0	High Flows

Table 7. Monthly Average Exceedances

Date	Parameter	Concentration (mg/L)	Objective (mg/L)	Limit (mg/L)	Issue
01/06/2023	TP	1.2	N/A	1.0	High Flows/ Industrial Loading
03/26/2023	pH	6.4	6.5	6.0	High Flows/ Industrial Loading
07/18/2023	CBOD	81	N/A	25	Foam/Spill Event
07/18/2023	TP	3.1	N/A	1.0	Foam/Spill event
07/18/2023	TAN	16.7	N/A	8.0	Foam/Spill event
07/19/2023	TAN	19.9	N/A	8.0	Foam/Spill event

10/02/2023	TAN	8.6	N/A	8.0	Aeration Project/Industrial Loading

Table 8. Single Sample Exceedances

Notice of Modification to the Works & Purposed Works

Alterations to the Wastewater Treatment Plant

There were two modifications to the process at the St. Marys WWTP in 2023:

1. The Grit Removal Upgrades, which modifications were part of the proposed works within ECA#6378-CB2M2T (Issued July 27, 2022). Communication and notifications were submitted to the MECP as required. The works are scheduled to be completed in 2024. Refer to Appendix D Modification of Works for Proposed Construction Schedule dated November 2023.
2. The Aeration Tank Upgrades, which required a Notice of Modification to Sewage Works in 2022 as required within ECA#6378-CB2M2T (Issued July 27, 2022) section 11 Limited Operational Flexibility. Communication and notifications were submitted to the MECP as required. The project was completed on November 2nd, 2023. Refer to Appendix D Modification of Works for signed LOF.

Alterations to the Wastewater Collection System

No alteration to the collection system posed any significant threat to the drinking water systems in 2023.

Sludge Generation and Haulage

Lystek International Inc and the Town of St. Marys have an agreement for marketing and management of the LystekGro fertilizer produced from the facility. Biosolids produced at the St. Marys WWTP are from the Lystek System which results in a federally registered fertilizer product with the Canadian Food Inspection Agency (CFIA). As such, the material is applied as a fertilizer, where the rate of application is based on soil characteristics and crop requirements.

The annual report from Lystek identified 2,960 m³ of biosolids were produced from the St. Marys WWTP in 2023. This is a 15.3% decrease compared to the 2022 value of 3,414m³.

The 2023 application season was a success for the St. Marys material which was marketed effectively and applied responsibly as a fertilizer. All hauling and application of material was completed according to best practices in terms of nutrient management.

It is estimated that approximately 3,200m³ will be produced in 2024.

Complaints

In 2023, a total of three complaints were received for the St. Marys WWTP.

On May 5th, 2023 an odour complaint for the WWTP was received from a local resident. Operational staff investigated and noted an odour at the time of the complaint. At the time of the complaint processing and hauling of the Lystek Biosolids was occurring.

On May 31st, 2023 an odour and noise complaint for the WWTP was received from a local resident. Operational staff investigated and noted an odour at the time of the complaint. At the time of the complaint processing and hauling of the Lystek Biosolids was occurring.

On July 21st, 2023 an odour complaint for the WWTP was received from a local resident. Operational staff investigated and noted an odour at the time of the complaint due to wind direction. At the time of the complaint processing of the Lystek Biosolids was occurring.

The St.Marys WWTP is undergoing upgrades, which includes a new odour control unit for the Lystek Process, this is anticipated to alleviate complaints in the future.

There were no complaints received for the Wastewater Collection System in 2023.

Bypass, Overflows, Spills and Abnormal Discharge Events

The ECA# 6378-CB3M2T issued on July 27, 2022 requires additional daily sampling for the WWTP when the plant is operated outside of normal operating conditions. Monitoring results during these events are included in final effluent monthly results. Refer to Figure 23 for number of days the WWTP operated outside its normal operating conditions. In addition, refer to Table 9 for details on each event.

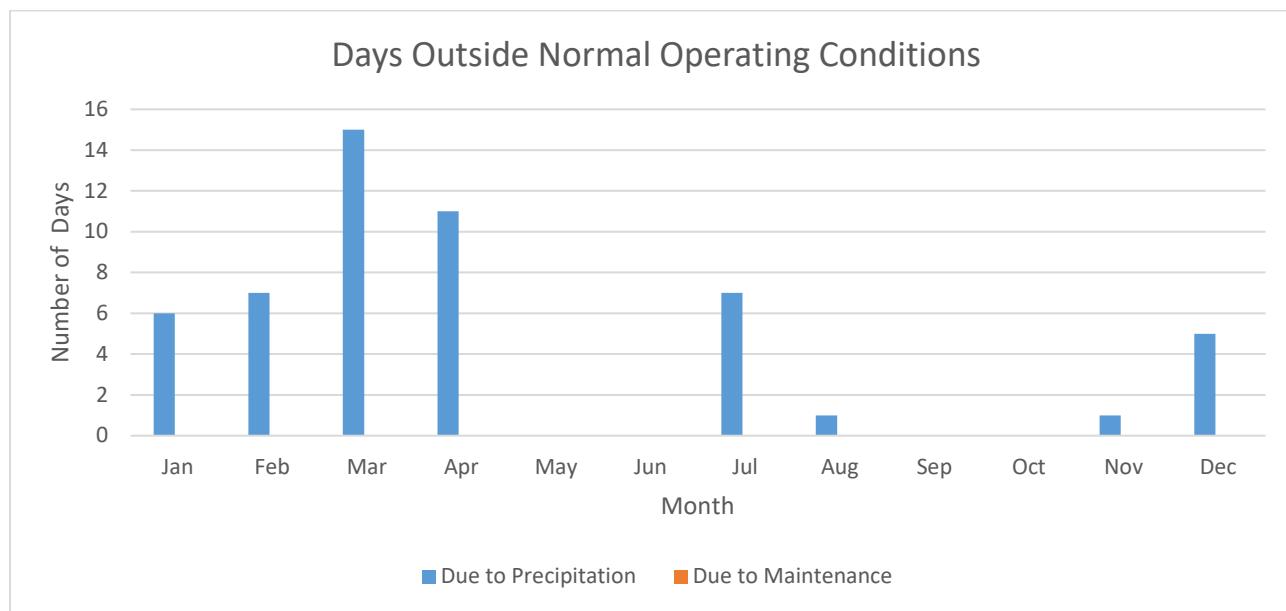

Figure 23. Days Outside Normal Operating Conditions

Date	Event Details	Date	Event Details
January 2, 2023	High flow, over capacity	April 4, 2023	High flow, over capacity
January 3, 2023	High flow, over capacity	April 6, 2023	High flow, over capacity
January 5, 2023	High flow, over capacity	April 10, 2023	High flow, over capacity
January 6, 2023	High flow, over capacity	April 13, 2023	High flow, over capacity
January 7, 2023	High flow, over capacity	April 25, 2023	High flow, over capacity

Table 9. Outside Normal Operating Conditions Event Details

On July 17th, 2023 operational staff had noticed large amounts of thick foam at the bar screen that was making its way through the WWTP. After investigation of the collection system it was traced back to a nearby manhole to determine the source of the foam was coming from an industrial user due to a cooling press failure. The industrial user was notified and ensured that corrective actions were implemented. This included; hourly checks and level alarms programmed within the PLC. The installation of a DAF treatment system was also completed at the industrial location.

On July 18th, 2023 the foaming condition had subsided and the WPCP began to recover. On July 19th, 2023 the WPCP continued to recover and returned to normal operating conditions. At the St. Marys WWTP operational staff monitored system performance, increased coagulant dosing, increased wasting and performed in-house analysis for the duration of the event. Daily effluent samples were collected of the event due to significant changes in influent characteristics being experienced. The event was sampled as Outside Normal Operating Conditions and results are included in final effluent monthly as seen in effluent results. Limit exceedance are identified within **Summary of Efforts Made to Achieve Design Objectives**. On September 6th, 2023 the local MECP inspector deemed the foaming event as a spill where it immediately notified to Spills Action Center under incident #1-3T86HK.

Summary of Efforts made to achieve conformance with F-5-1

The Town of St. Marys is a separated collection system, therefore a Pollution Prevention Control Program is not required to be established or maintained.

There are two designed overflows within the collection system and one at the treatment plant for the protection against basement flooding, damage to equipment/property and prevention of treatment process wash out. No overflows or bypasses have occurred in 2023, therefore no projects were completed in 2023 or planned for 2024 as there is no need to undertake an overflow/bypass overall reduction or elimination.

Part 1 – Environmental Compliance Approval (ECA) with Limited Operational Flexibility

(Insert the ECA's owner, number and issuance date and notice number, which should start with "01" and consecutive numbers thereafter)

ECA Number 6378-CB3M2T	Issuance Date (mm/dd/yy) 07/27/22	Notice number (if applicable)
ECA Owner The Corporation of the Separated Town of St. Marys	Municipality The Town of St. Marys	

Part 2: Description of the modifications as part of the Limited Operational Flexibility

(Attach a detailed description of the sewage works)

The existing fine bubble aeration diffuser system within the three aeration tanks and within the inlet channel to the aeration tanks at the Water Pollution Control Plant in St. Marys are over 20 years old and in a constant state of repair. The Town is looking to replace this aeration system under the LOF clause in the existing ECA for the following reasons:

- The replacement of the aeration system will *"not result in a reduction in the firm capacity or discharge pressure that the blowers are originally designed to supply or in the net oxygen transferred to the wastewater required for biological treatment as originally required"*, in accordance with the wording in the existing LOF.

The descriptions in the existing ECA are still accurate and no revisions are required based on the work completed and described above.

Description shall include:

1. A detail description of the modifications and/or operations to the sewage works (e.g. sewage work component, location, size, equipment type/model, material, process name, etc.)
2. Confirmation that the anticipated environmental effects are negligible.
3. List of updated versions of, or amendments to, all relevant technical documents that are affected by the modifications as applicable, i.e. submission of documentation is not required, but the listing of updated documents is (design brief, drawings, emergency plan, etc.)

Part 3 – Declaration by Professional Engineer

I hereby declare that I have verified the scope and technical aspects of this modification and confirm that the design:

1. Has been prepared or reviewed by a Professional Engineer who is licensed to practice in the Province of Ontario;
2. Has been designed in accordance with the Limited Operational Flexibility as described in the ECA;
3. Has been designed consistent with Ministry's Design Guidelines, adhering to engineering standards, industry's best management practices, and demonstrating ongoing compliance with s.53 of the Ontario Water Resources Act; and other appropriate regulations.

I hereby declare that to the best of my knowledge, information and belief the information contained in this form is complete and accurate

Name (Print) Ryan P. DeVries	PEO License Number 100183886
Signature 	Date (mm/dd/yy) 12/15/22
Name of Employer B. M. Ross and Associates Ltd.	

Part 4 – Declaration by Owner

I hereby declare that:

1. I am authorized by the Owner to complete this Declaration;
2. The Owner consents to the modification; and
3. This modifications to the sewage works are proposed in accordance with the Limited Operational Flexibility as described in the ECA.
4. The Owner has fulfilled all applicable requirements of the *Environmental Assessment Act*.

I hereby declare that to the best of my knowledge, information and belief the information contained in this form is complete and accurate

Name of Owner Representative (Print) DAVE BLAKE	Owner representative's title (Print) ENVIRONMENTAL SERVICES MANAGER
Owner Representative's Signature 	Date (mm/dd/yy) 12/16/22

Notes for Notice of Modification

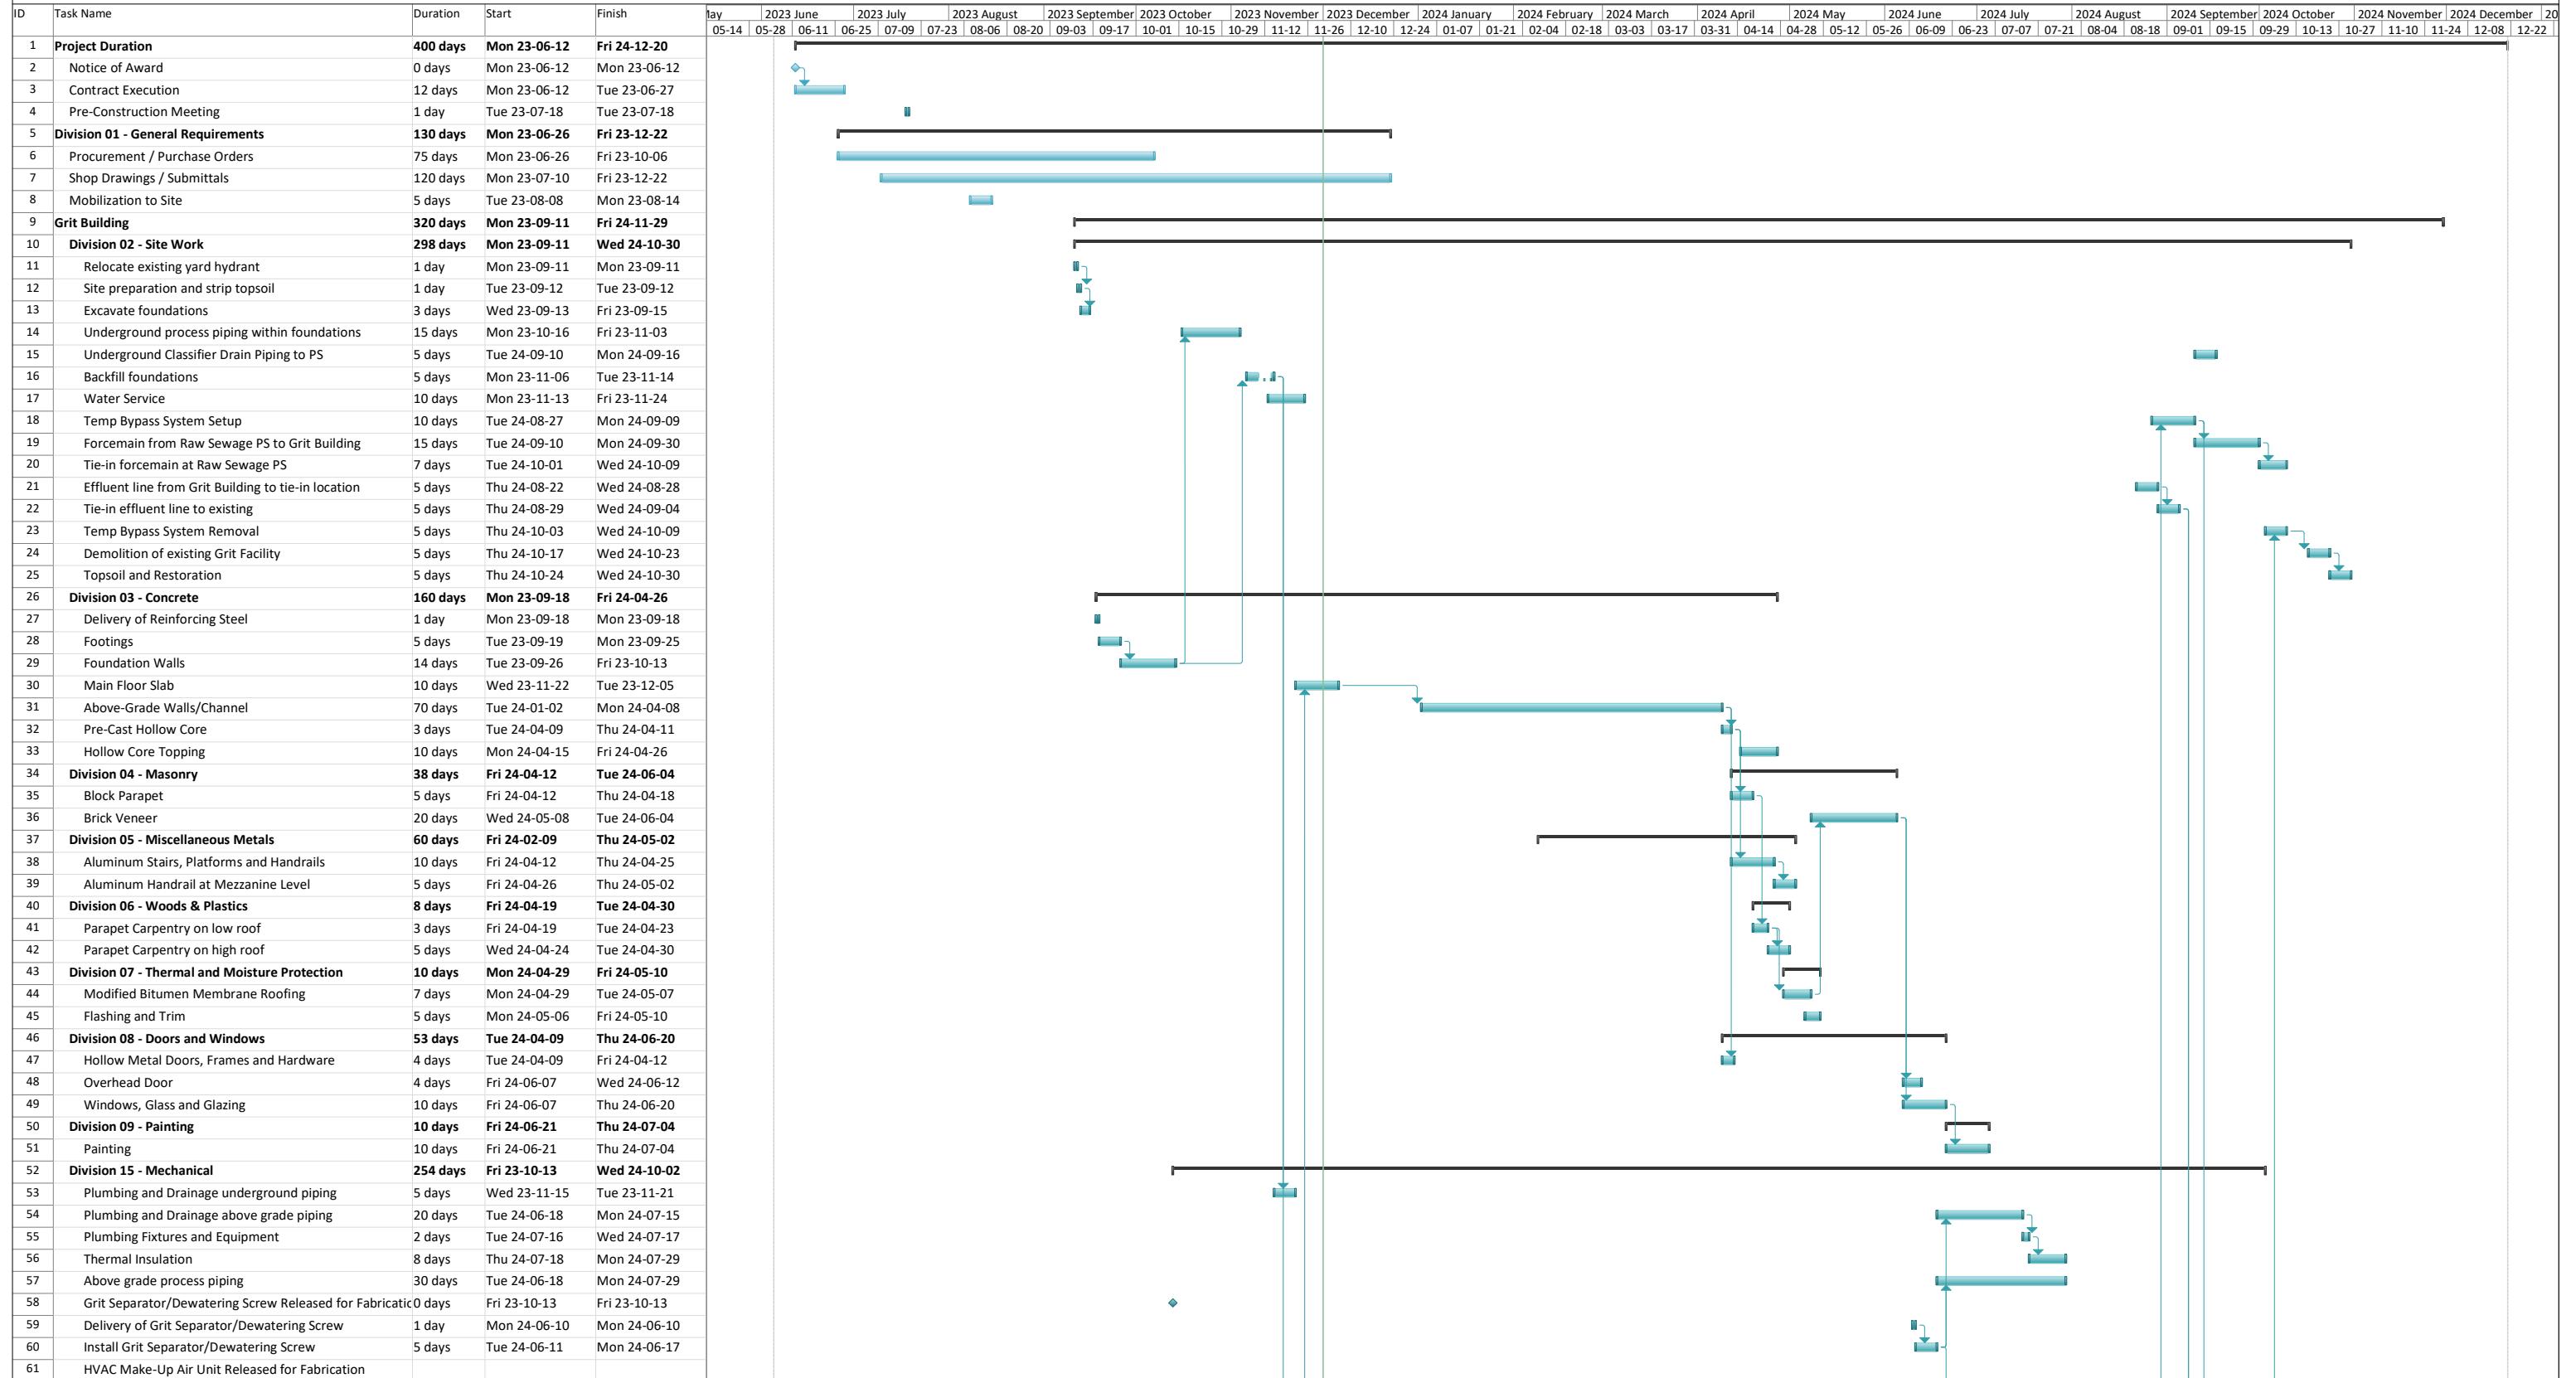

St. Marys WPCP Fine Bubble Aeration System Replacement – Page 32 of ECA, Part 2

The existing fine bubble aeration diffuser system within the three aeration tanks and within the inlet channel to the aeration tanks at the Water Pollution Control Plant in St. Marys are over 20 years old and in a constant state of repair. The Town is looking to replace this aeration system under the LOF clause in the existing ECA for the following reasons:

- The replacement of the aeration system will “*not result in a reduction in the firm capacity or discharge pressure that the blowers are originally designed to supply or in the net oxygen transferred to the wastewater required for biological treatment as originally required*”, in accordance with the wording in the existing LOF.

The descriptions in the existing ECA are still accurate and no revisions are required based on the work completed and described above.

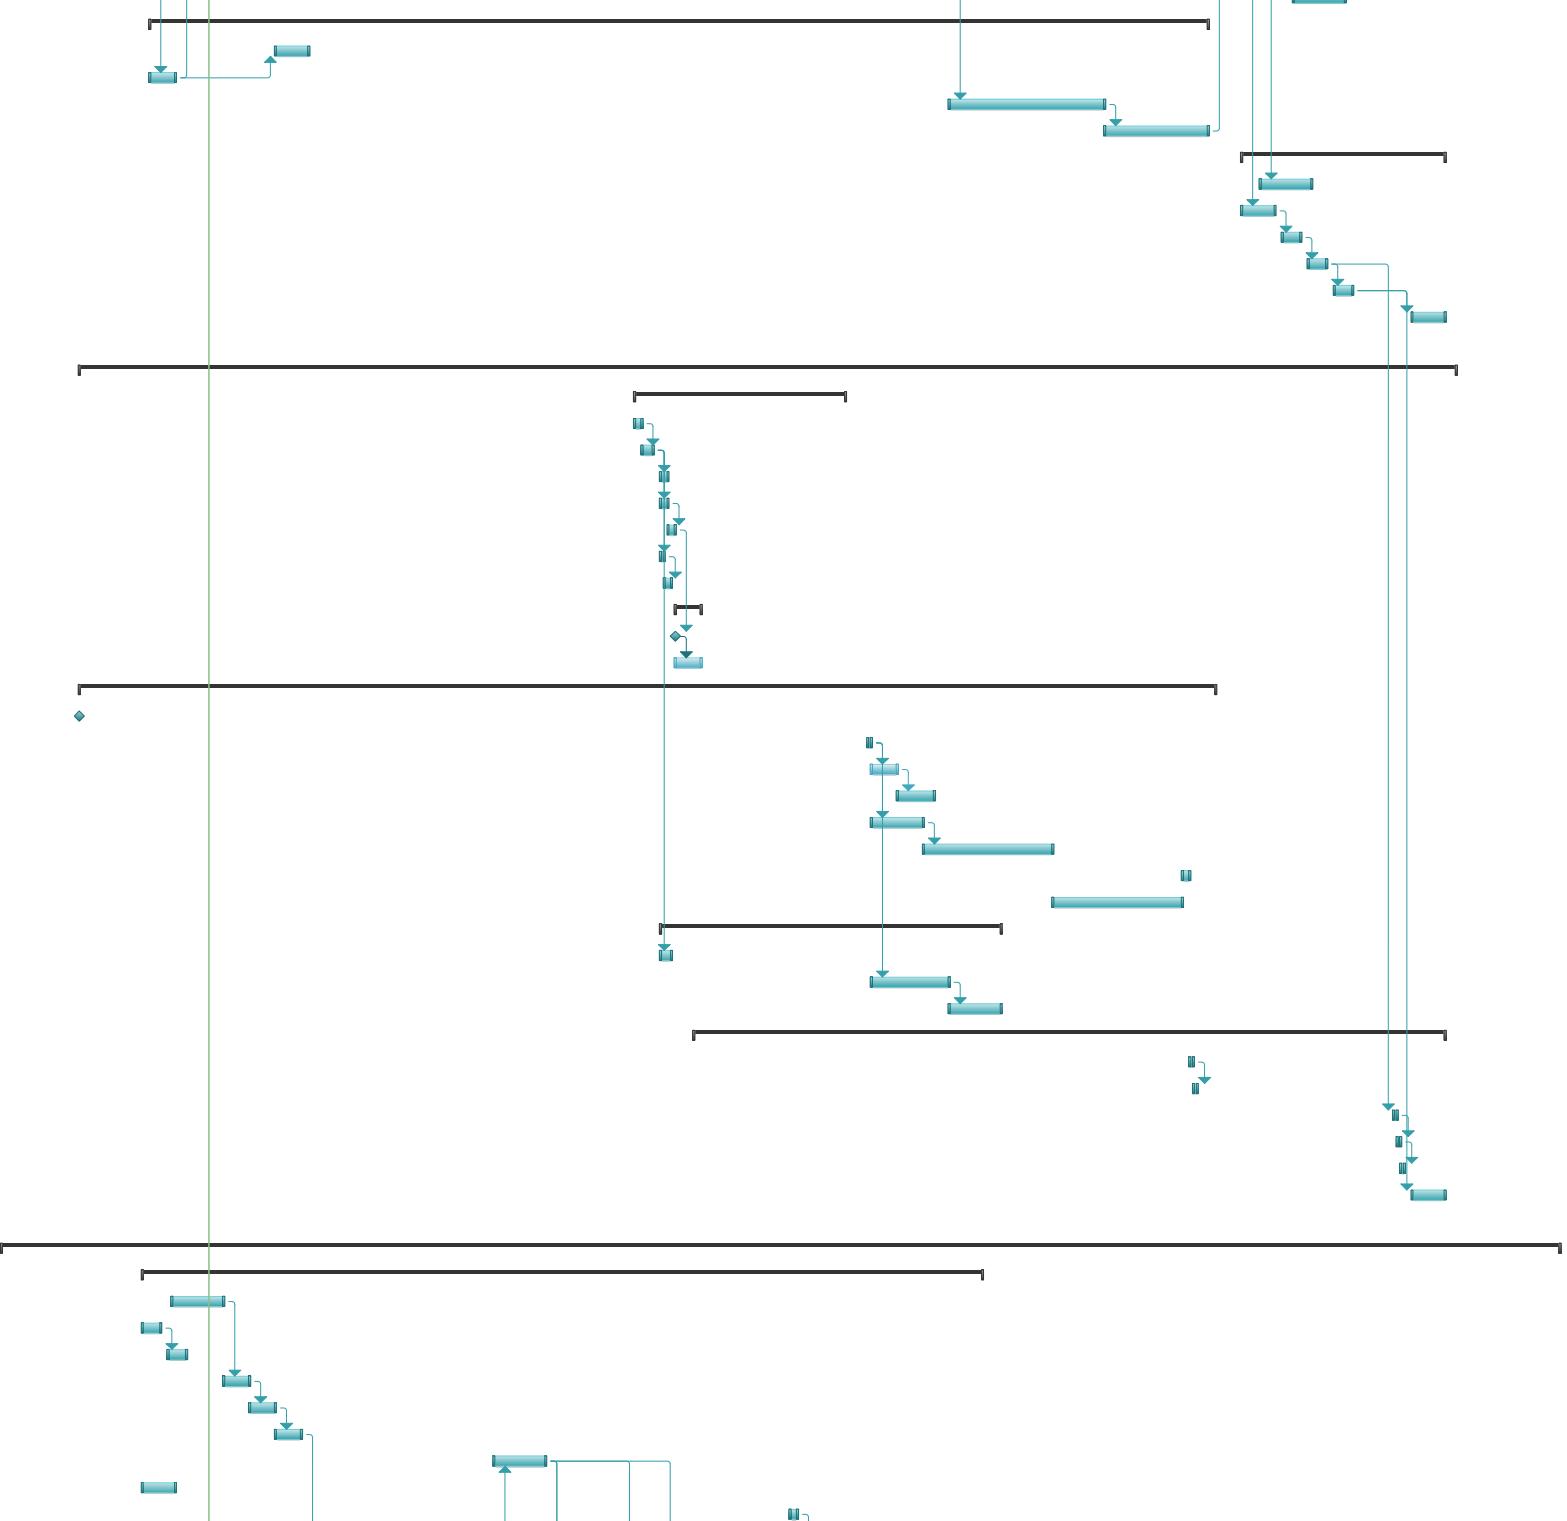

St. Marys WWTP Upgrades
Town of St. Marys Contract NO. PW-08-2023-RFT
Proposed Construction Schedule
November 30, 2023

The Gantt chart displays the following key information:

- Timeline:** The chart spans from May 2023 to December 2024.
- Vertical Axis:** Projects and tasks are listed vertically on the left, with some sections grouped by category (e.g., "Division 16 - Electrical").
- Horizontal Axis:** Dates are indicated at the top for each month from May 2023 to December 2024.
- Task Representation:** Tasks are shown as horizontal bars. Solid blue bars represent primary tasks, while dashed blue bars represent secondary or dependent tasks.
- Dependencies:** Arrows connect tasks to show their sequence and dependencies. Some tasks have arrows pointing to them, indicating they are prerequisites.
- Key Dates:** Specific dates for task starts and finishes are provided for each entry.

Project: St. Marys WWTP Upgrade
Date: Fri 23-12-01

St. Marys WWTP Upgrades
Town of St. Marys Contract NO. PW-08-2023-RFT
Proposed Construction Schedule
November 30, 2023

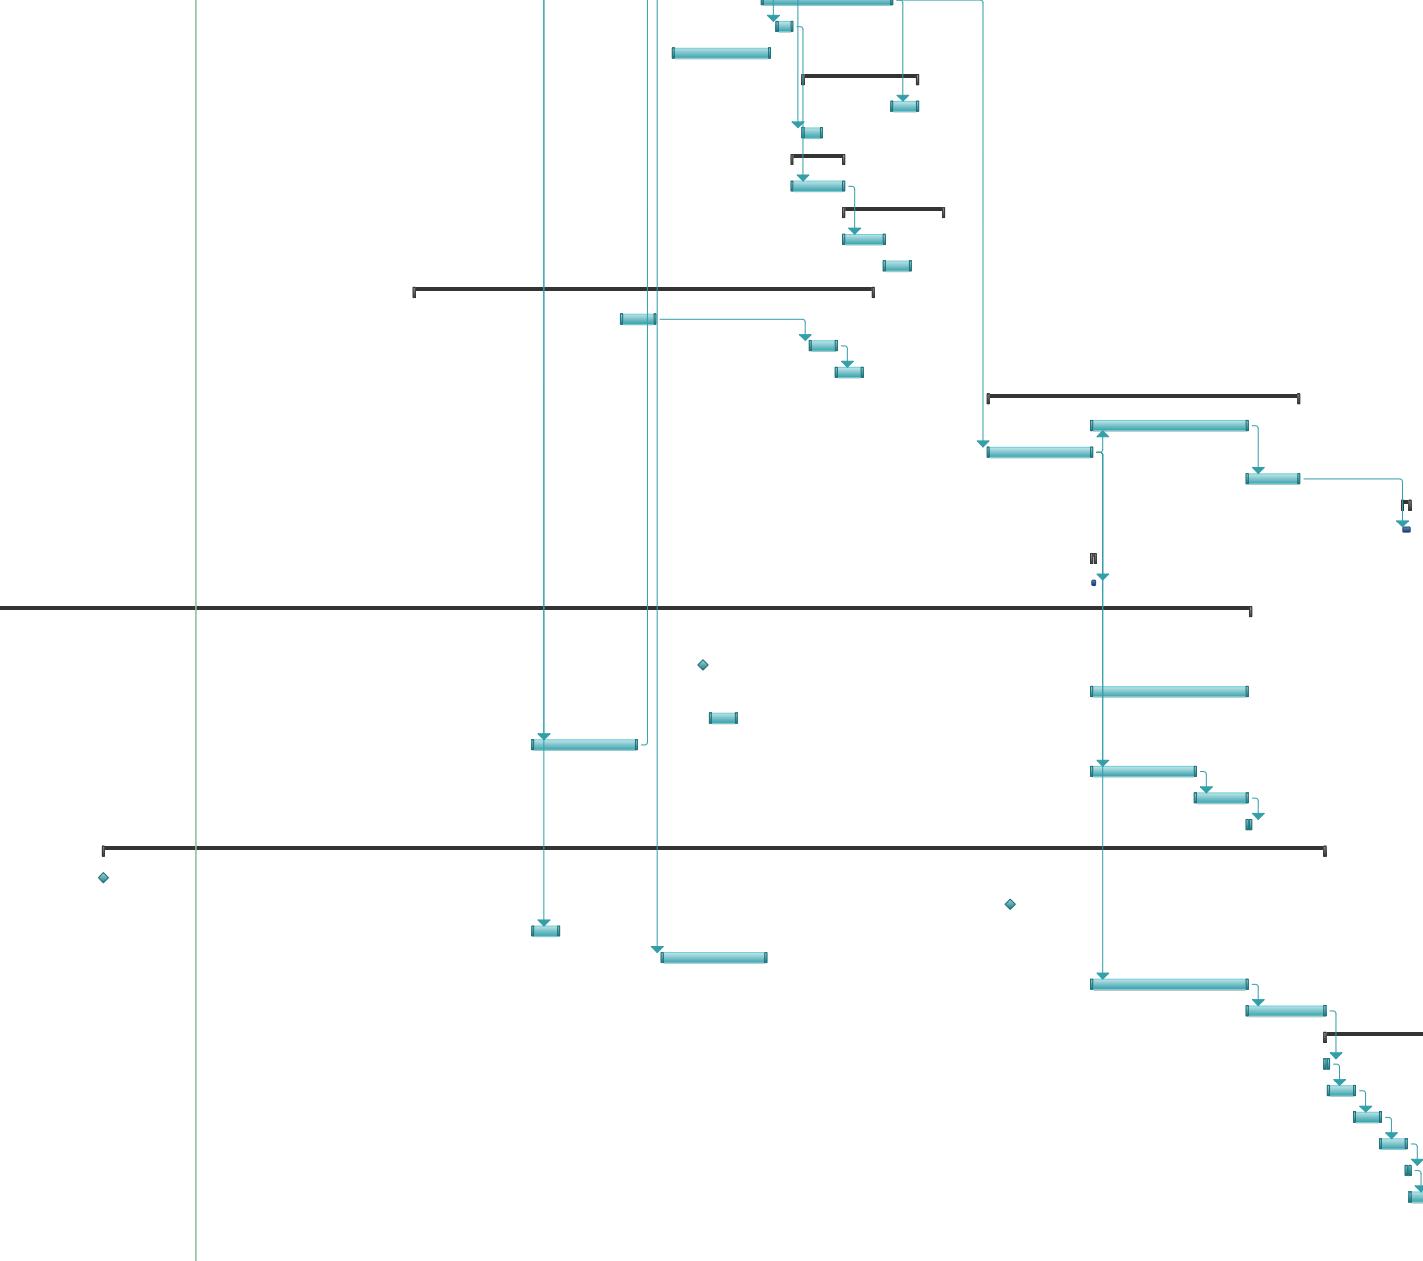

The Gantt chart illustrates the project timeline across various months and years. The tasks are categorized into divisions, and their progress is tracked through start and finish dates, duration, and specific milestones.

Legend:

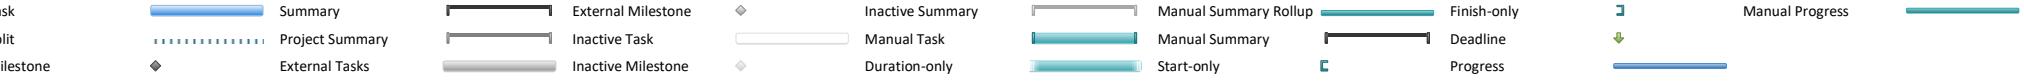

- Start Date: Indicated by a diamond symbol.
- End Date: Indicated by a square symbol.
- Duration: Indicated by a horizontal bar representing the time span of the task.
- Milestone: Indicated by a vertical arrow pointing downwards.

Instrument Calibration Sheet

Client Name: Ontario Clean Water Agency

Date: June 7, 2023

Equipment Description: RAS Flow Meter

Assigned Number: FIT-03

Area Located: St. Mary's WPCP

Asset Number: 0000065564

Instrument Data

Manufacturer: ABB Kent-Taylor

Model Number: Magmaster

Type: Mag Flow

Serial Number: V/87122/1/1

Range: 0 - 50 l/s

Accuracy: ± 1%

Method Of Calibration: Greyline PDFM 5.1

Application: Wastewater

Calibration Data

Input %	Input	As Found	As Left	Pass/Fail
0	4 mA	0.00 l/s	0.00 l/s	Pass
25	8 mA	12.21 l/s	12.21 l/s	Pass
50	12 mA	25.58 l/s	25.58 l/s	Pass
75	16 mA	37.12 l/s	37.12 l/s	Pass
100	20 mA	50.0 l/s	50.0 l/s	Pass

Confirmed Run Mode: ✓

Placed back in service: ✓

Comments:

Meter has coil failure and is recommended for replacement.

VISUAL AND
FUNCTIONAL
INSPECTION

Visual Inspection – Sensors, enclosures, connections, display, switches, pushbuttons, nameplates, tags are to be checked for its presence, physical integrity, cleanliness, readability and adequacy of installation

Functional Inspection – Switches, pushbuttons, display, signal integrity, response to process variable and response to calibration standards are to be checked for functionality, response within manufacturer's and end-user specifications

The sensors were cleaned and the analyzer calibrated.
